#### 1.0 Introduction

#### **Purpose**

The process for comprehensive planning in Paulding County is based on the Georgia Planning Act of 1989 (as amended). The Act required all county and municipal governments in the State of Georgia to develop a Comprehensive Plan. The Minimum Planning Standards established by the Planning Act required local governments to include topical elements in their Comprehensive Plan. These elements included Population, Economic Development, Housing, Natural Resources, Cultural Resources, Community Facilities and Services, Intergovernmental Coordination, Transportation, and Land Use.

The Community Assessment is the foundation by which revisions and updates will be made to the Paulding County Comprehensive Plan (2002-2022). The Assessment will consist of analyzing data and information about the community and presenting the findings in an easily understandable format. The data and information contained in the Community Assessment will be the basis of the development of a Community Agenda. The Paulding County Comprehensive Plan will include the Cities of Dallas, Hiram, and Braswell.

Paulding County and the Cities of Dallas, Hiram, and Braswell are required to complete an update to the Comprehensive Plan by June 30, 2007. Due to Paulding County's size and location, the Comprehensive Plan update will be prepared in accordance with the Advanced Planning Level Local Planning Requirements established by the Georgia Department of Community Affairs (DCA) effective May 2005.

Paulding County recently prepared a major update to the Comprehensive Plan in 2002 and 2003. Much of the data, information and goals obtained and analyzed in the current Comprehensive Plan (2002-2022) will be used in the creation of the Plan's update, since much of the 2000 Census data had been included in the 2002-2022 Plan. The Paulding County Chamber of Commerce was also instrumental in beginning an update to the Comprehensive Plan in May 2005 when the Chamber had the DCA Resource Team come to the County and provide valuable technical assistance, analysis, and recommendations. The Resource Team input will be included in the Comprehensive Plan update.

## **Scope**

The Community Assessment includes the identification of specific issues Paulding County and its cities are facing and provides opportunities, which address those community issues. The Assessment also includes an analysis of existing development patterns, an updated existing land use map, identification of areas requiring special attention and the identification or recommended character areas. The Community

Assessment will be analyzed for it's consistency with established State Quality Community Objectives. As mentioned above, the updated Paulding County Comprehensive Plan (2007-2027) will include the Cities of Dallas, Hiram, and Braswell.

The Community Assessment including a Citizen Participation Plan and supporting analysis of data and information will be submitted to the Coosa Valley Regional Development Center (RDC) and the Georgia Department of Community Affairs (DCA) for review and approval.

## 2.0 Issues and Opportunities

The following is a listing of issues and opportunities facing Paulding County and its cities that coincide with identified State Planning Goals.

## **Population Change**

#### **Issues**

Paulding County has experienced a rapid rate of population growth in recent years. Between 1990 and 2006, Paulding County's population increased 192 percent (41,611 in 1990 to 121,530 in 2006). Recently between 2000 and 2006 Paulding County's population increased 48.9 percent (6.99 percent annual average) from 81,608 to 121,530. Paulding County has consistently ranked within the top ten counties nationally as one of the fastest growing counties by percent change.

Forecasts indicate that the County will continue to experience a rapid growth rate over the next twenty years with an anticipated, average growth rate of 5.6 percent (based on 2000 population data). The forecasted 2030 population is estimated to be 221,882. The City of Dallas should account for approximately 21,993 of that total, while Hiram should account for just over 3,782 residents. The City of Braswell is anticipated to have population (Paulding County portion) of 344 in 2030.

## **Economic Development**

#### **Issues**

- 1. Provide educational opportunities specific to the workforce needs of the community and to meet the needs of existing and future business standards.
- 2. Provide a focus for future marketing efforts to seek new and diverse industry and business.
- 3. Traditional economic development opportunities are limited due to a present lack of industrial sites and buildings.
- 4. Protection of the quality of life and a continued sense of place within the communities.

- 5. Strengthen the economic sales team and procedures to maximize the industrial and business recruitment efforts.
- 6. Excluding the construction industry, large retail business, and government sector, the County has limited economic activity.
- 7. Infrastructure including water and sewer service must keep pace with growth and opportunities to accommodate potential new industry and businesses.
- 8. Capture of retail sales leakage from the County.
- 9. Incentive options and marketing for potential new industry and businesses.
- 10. Team effort leadership throughout the communities to support expansion of current industries and businesses and seeking new industry and business.
- 11. Establish a clear and specific community identity in promoting economic development.
- 12. Tourism promotion as a critical element of economic development.
- 13. Retention of educated work force within the community.
- 14. Utilization of state assistant in economic development issues.
- 15. Diversification of industry and business attraction to the County in absents of interstate access.
- 16. Utilization of Silver Comet Trail economic development.
- 17. Overlay districts for site planning and design standards.
- 18. New County government complex centralized relocation.
- 19. Airport development and construction with associated technology parks, mixed-use developments and greenspace components.

### **Opportunities**

- 1. Focus local labor force training and recruitment initiatives on matching labor skill-sets with industry and business needs.
- 2. Encourage and support continued expansion of local job training programs including the expansion of the Chattahoochee-Tech as the educational foundation.
- 3. Continue to diversify the local economy by completing the construction of the Paulding County Regional Airport and associated business opportunities, as well as supporting industrial/business park developments and/or expansions.
- 4. Continued master planning of the airport, technology parks, mixed-use development and greenspace. Include economic outreach nationally and internationally.
- 5. Preservation of potential industrial areas through comprehensive planning and zoning regulations.

- 6. Implement an entrepreneurial program and business incubator with Chattahoochee Tech as a foundation of community identity.
- 7. Implementation of the county-wide water/sewer plan.
- 8. Educate retail sector, service sector, and citizens regarding community vision and economic development through Chamber of Commerce.
- 9. Redevelop vacant big boxes for use as call centers, administrative offices, reference labs, back office, etc.
- 10. Secure secondary business and industrial sites especially along the Dallas-Hiram corridor. Select existing sites that already zoned industrial, closer to existing infrastructure, and transportation.
- 11. Use Civil War history in Paulding County to promote tourism. Battles of Dallas, New Hope Church, and Pickett's Mill.
- 12. Visit other communities who are successful with alternative forms of economic development: identity branding, partnerships, entrepreneurships, recruiting, and redevelopment.
- 13. Support downtown development efforts of Dallas and Hiram, including cultural and gathering center.
- 14. Strengthen the Economic Development Sales Team. Systematically train people who represent economic development resources, i.e. education, government, and private sector.
- 15. Broaden economic development finance training for key community leadership through National Development Council.
- 16. Assess the business attraction potential for professional, services, retail, light manufacturing, and tourism related to the Silver Comet Trail. Capitalize on a unique community asset that may have inestimable promotional value to bike, skate, and runner manufacturers and retailers.
- 17. Analyze the need for high-end retail located in already developed commercial/retail centers.
- 18. Analyze and define local, state, and federal incentive options and learn how to apply them. Differentiates the community from the competition.
- 19. Develop a long-range plan for infrastructure, funding and location of business and industry.
- 20. Develop tourism plan and identify tourism assets as part of an overall economic development plan.
- 21. Analyze opportunities for specialized and alternative agriculture in support of Metro market.
- 22. Consider revitalizing development authority through statutory designation and adding assigned staff and a trained sales team. Utilize the Dallas Redevelopment Authority.

- 23. Develop a specific identity and economic development focus that reflects the vision of the community.
- 24. Develop face relationships and networks with Community Development Corporations (CDC's), GDCA, GDEcD, GEDA, GDOT, SBA, state and federal legislative delegations.
- 25. Set aside SPLOST funds specifically for economic development efforts.
- 26. Develop community investment opportunities (foundations, investment corporations, etc.)
- 27. Develop and implement comprehensive destination and identifier signage in conjunction with artery beautification.
- 28. Build on above recommendations to position for success in airport park project.
- 29. County-wide Develop and implement a consistent local historic marker design that clearly distinguishes markers from commercial signage. At these marker locations, provide area for residents and tourists to pull out of traffic to view the marker. Will relate the history of Paulding County to residents and tourists and provide another draw for the community. Will play a major role in the development of heritage tourism and arts/culture programming.
- 30. Downtown Dallas currently has two successful events per year. To increase the traffic flow downtown, Dallas should coordinate with other community organizations about having their cultural activities in the new town square. The benefit to coordinating with other community organizations is that it spreads the word about the downtown. It also keeps the downtown busy and the center for activity. It is very necessary to have the downtown the center of community activities to create a sense of place and make a return on all investment dollars spend on streetscaping and Downtown Revitalization.
- 31. Dallas and Hiram participation in the LCI (Livable Centers Initiative) studies and funding.
- 32. The City of Dallas is considering an organized downtown economic development organization through reactivation of the Downtown Development Authority, a Merchants Association or a combined agency effort. In order to maintain customer traffic and a healthy Downtown, Merchants must be in constant communication with one another and their local government.
- 33. The City of Dallas is beautifying the city with new streetscaping and a new plaza making it attractive to potential businesses and consumers. The look of Downtown will be one key in business and visitor recruitment.
- 34. Dallas to apply for Main Street designation. So City can receive assistance from DCA and other sources to revitalize and maintain the vibrancy of downtown Dallas. To make the City attractive as a vibrant focal point for the County.

- 35. Post attractive and accurate signs for various major destinations and functions (e.g., downtown Dallas, Hiram, and Braswell) on the Silver Comet Trail for food, bike rental, shops; etc.)
- 36. Hiram should consider adding a trail connection to the Silver Comet Trail. Trail users could be a dramatic new source of revenue for downtown Hiram. Trail connection could promote significant economic investment for downtown Hiram.
- 37. Plan and develop a Dallas trailhead and spur to the Silver Comet Trail.

#### **Natural and Cultural Resources**

#### **Issues**

- 1. Growth impacts on environmentally sensitive areas (slopes, groundwater recharge areas, streams)
- 2. Greenspace and rural characteristics preservation.
- 3. Overall infrastructure including water, sewer, and transportation services must keep pace with growth.
- 4. Reservoir and drinking water supply protection.
- 5. Development community awareness of natural and cultural resources.
- 6. Greenspace connectivity, local trail system and wildlife movement regarding development impacts.
- 7. Erosion, storm water management, runoff and sedimentation management.
- 8. Development impacts of historically significant structures and/or areas.
- 9. Community resources may not play a significant enough role in decision-making
- 10. Silver Comet Trail protection from impacts of adjacent development.
- 11. Current development practices increase the long term cost of storm water handling and increase the likelihood of environmental damage.
- 12. Historic areas, sites, and buildings are being impacted by new developments.
- 13. County is insufficient in cultural arts and civic needs for citizens.

### **Opportunities**

- 1. Assemble a county wide natural resource inventory identifying canopy loss, impervious surface gain, and agricultural resources on a sub watershed level.
- 2. Provide baseline information on the current state of the natural resources in the county as well as the trends in loss of resources.

- 3. Create and actively promote an interconnected greenspace / park program involving passive and active recreation opportunities focused near urban residential centers and conserved green space areas including: Ball fields, Walking trails, Bike trails, Cultural / Arts, Historical sites, Educational centers, Libraries and the Silver Comet Trail.
- 4. Preserve and utilize 7,500 plus acres of greenspace in overall airport, technology park, and village plan(s).
- 5. Develop a Silver Comet trail trailhead connection plan and expand trailhead (conserving more greenspace and reducing developmental impacts.
- 6. Expand Silver Comet Trail with expanded spur trails linking to residential areas.
- 7. Revise ordinance and regulations to establish corridors for wildlife.
- 8. Establish a community land trust—funded through Georgia Land Conservation Act funds and community developer contributions.
- 9. Establish a citizen greenspace committee to recommend and support local greenspace acquisition—encouraging the use of conservation easements.
- 10. Identify and establish scenic corridor overlays to conserve scenic and historic character of the community. (Identify possible view sheds and create protection through zoning ordinance.
- 11. Develop a county wide sewer plan compatible with proposed conservation opportunities, identified conservation/greenspace properties, and greenspace plans. Limit sewer additions and other infrastructure in conserved areas.
- 12. Enhanced protection of current, county greenspace properties.
- 13. Restrict development in hydrologic ally sensitive areas (floodplains, wetlands, ground water recharge areas) and poor soils.
- 14. Limit the amount of impervious surface on a per acre basis for all development, encouraging the use of semi-pervious materials.
- 15. Identify a maximum (verses a minimum) number of parking spaces per square foot of development, requiring the planting of trees within the interior of parking lots. Require an established ratio of trees and parking spaces.
- 16. Establish a plan review process that provides for the oversight and approval or denial of proposed conservation measures on all development sites.
- 17. Establish a separate overlay district for all low-density residential zoning that requires 10% greenspace.
- 18. Establish a separate overlay district for higher and medium density residential zoning that requires 25% greenspace.
- 19. Require the conservation or establishment of a minimum vegetative buffer between dissimilar land uses and residential developments.

- 20. Establish a community tree ordinance that would provide for the conservation of established trees and planting of trees to meet a community minimum standard on all commercial, industrial, and new residential property.
- 21. Enforce current 75-feet (50-feet undisturbed, 25-feet impervious) stream buffers.
- 22. Participate and support Etowah Conservation Plan recommendations.
- 23. Recognize, support and protect historic districts, sites, and buildings.
- 24. Support and participate in all present and future cultural and civic programs and/or developments within County and each City.
- 25. The City of Dallas has rebuilt the historic Dallas Theatre in the downtown district. The renovated theatre is considered the Dallas-Paulding County Civic and Cultural Center. This project was intended to create a cultural and historic focal point for the city and county. With 600 seats, it can serve as a community performing arts and meeting space. A cultural center, particularly one with a strong historic identity, builds community pride and cohesiveness. Dallas and Paulding County has a socioeconomic demographic that should provide good usage and financial support for this type of facility. Cultural centers are also a key component of the optimum mix of downtown activities (along with retail, service, governmental/institutional, and residential). Cultural centers typically promote redevelopment and reinvestment in neighboring commercial spaces.
- 26. Provide a specific designation to the waterfall area which the County purchased as part of the State Greenspace Program.
- 27. Prepare a study for the feasibility of building a County civic/conference/trade center. The study should be specific regarding the type and particular functions of such a facility that would be best suited for the County. Contribute to the economic vitality of the County. To give the County another focal point for economic, entertainment and civic reasons.
- 28. Create a joint city-county task force on arts/culture/historical (composed of local arts/culture/historical groups, librarians, educators, city/county recreation departments, etc.) to help develop and promote programming in the community. Will improve communication and cooperation among all groups currently involved in arts/culture/historical programming. Will ensure that programming takes maximum advantage of all local, state, and federal resources, will maximize the use of volunteer time, and will connect programming on multiple fronts.

#### **Housing**

#### **Issues**

- 1. Standards for architectural quality for residential developments.
- 2. Housing type and style mix standards.

- 3. Special needs housing (Senior Assisted Living, Retirement Communities). Create higher density, small floor plan housing options for senior living and assisted living.
- 4. Promote housing development above "starter-home" markets
- 5. Association of mixed neighborhood business with residential development.
- 6. Incorporation of topography and other environmentally sensitive areas within developments.
- 7. LCI study for the City of Dallas identified that a housing type mix is necessary.
- 8. Downtown Dallas connection to new County Government Complex.

### **Opportunities**

- 1. New development should be a master planned community with mixed uses, blending residential development with schools, parks, recreation, retail businesses and services, linked in a compact pattern that encourages walking and minimizes the need for auto trips within the subdivision. Provides a sense of community. Also can establish minimum home size in planned communities.
- 2. Continue to educate developers in smart growth design and practices. Results in developments that are compatible with the character of surrounding neighborhoods with aesthetic appeal. Avoid Cookie-cutter look.
- 3. Encourage continued communication between developers and community leaders so that developments are compatible with the surrounding environment and the needs of the potential homebuyer.
- 4. Discussion of standards for building materials shape and massing help ensure that structures conform to natural topography and blend into natural surroundings. Brings more rationality to growth and development.
- 5. Provide a relationship between housing needs and land use.
- 6. Dallas, Hiram and Braswell should continue to provide a housing mix.
- 7. Create a mixed commercial and residential use.

## **Transportation**

#### Issues

- 1. Transpiration funding for all aspects of projects including state and local road improvements.
- 2. Numerous areas of the county are rapidly suburbanizing.

- 3. Level of Service (LOS) for many of the thoroughfares and collectors in the eastern portion of the county are LOS E or F.
- 4. Increase in accidents, congestion, and gridlock at peak traffic hours.
- 5. Citizens are experiencing increasing commute times.
- 6. Pedestrian and alternative transportation modes are inadequate.
- 7. Little or no flexibility to adjust the design or operation of roadways in case of future changed conditions (example: new development impacts).
- 8. Increased connectivity to the Silver Comet Trail. Current access to the trail is limited; people would use it more for short trips if they could get to it more easily. Need for a Dallas Trailhead and spur to the Silver Comet Trail.
- 9. Pedestrian friendly downtown business districts and retail developments occurring on thoroughfares.
- 10. Downtown cross walks are not as effective as needed to promote pedestrian amenities and safety.
- 11. Housing, jobs, daily needs and other activities are not within easy walking or driving distance.
- 12. Downtown parking for business, services and events.
- 13. Sidewalk expansions for Dallas, Hiram and Braswell for connectivity. Dallas sidewalk extensions up to three miles in total would provide connectivity.

#### **Opportunities**

- 1. Continued cooperation with Federal, State, and Regional agencies in an effort to support current and future transportation projects within Paulding County as well as assistance in funding qualifying projects.
- 2. Provide additional transportation improvement funds that can be directed to County DOT projects. Continue to seek support for Special Purpose Local Option Sales Tax (SPLOST) for local transportation system improvements, sidewalks, and connections to the Silver Comet Trail.
- 3. Continue to require vehicle connectivity between residential developments and residential and commercial developments.
- 4. Continue to require pedestrian connectivity between residential developments and residential and commercial developments including trails and sidewalks.
- 5. Plan, program and construct a Highway 61 –Dallas Bypass north of Dallas providing connection to U.S. 278

- 6. Require transportation impact studies for large residential developments (minimum 200 units per acre).
- 7. Continue to develop an overall comprehensive transportation plan including road and street improvements, bridge replacements, intersection improvements, pedestrian mobility improvements and connections to the Silver Comet Trail. The Paulding County Comprehensive Transportation Plan is considered part of this 2007-2027 Comprehensive Plan.
- 8. Modify development regulations, on a county-wide basis, to set standardized contributions to be imposed on developers of new residential subdivisions. The money will be used for transportation improvements, near the development sites, that mitigate additional traffic caused by the developments.
- 9. Plan, support, participate and encourage business, office and industrial diversification within the county to promote job creation in an effort to provide local, income comparable jobs to decrease commuting out of the county.
- 10. Modify zoning requirements to allow more flexibility in minimum parking space requirements and set maximum parking allowed, especially for big-box and large developments.
- 11. Encourage creation of strip malls with multiple tenants and uses, which share parking, instead of parcels with only one use where parking is only for that one tenant.
- 12. Allow for smaller parking lots, where feasible. Save land and reduce non-permeable surfaces or require permeable parking areas.
- 13. Create parking plans for downtown Dallas and Hiram. Include parking deck consideration for the City of Dallas.
- 14. Improve access for pedestrians and bicyclists. Provide alternate transportation choices. Create a more pedestrian friendly, less car-dependent community.
- 15. New developments of any kind must build on current requirements for connectivity between streets in adjacent developments. This must be done at the planning stage, before approval is given. Future developments must be anticipated.
- 16. Require designated walkways in all proposed retail and office parking lots.
- 17. Create and coordinate countywide trail way plan, bringing developer built trails into network. Require easements for railways, and build spurs off Silver Comet Trail.

- 18. In Rural areas, especially north and west portions of the county including Braswell consider delaying expansion of 2-lane roads in these areas to focus intense development in the eastern and southeastern parts of the county. Preserves rural atmosphere and conserves green space. Limits development to where it has already occurred. Reduces traffic congestion in other parts of the county.
- 19. Complete the construction the Paulding County general aviation airport. Provides opportunity for business and recreational trips to be made in the area. State plans and locally sponsored studies have indicated that an airport in Paulding County would enhance the desirable geographic distribution of Level II airports.
- 20. Promote Silver Comet Trail to current residents as an alternative form of transportation. Get citizens to think of the trail as not solely a recreational trail but also a functional path. Silver Comet runs parallel to U.S. 278 and is a safer option for pedestrians than trying to walk or ride a bike along U.S. 278.
- 21. Develop spur trails off of Silver Comet Trail to create more connectivity throughout the county to residential areas, commercial nodes, downtowns, schools, parks, and community facilities. Facilitates the use of walking trails as an alternative transportation mode by connecting the trails to places that people need to go.
- 22. Develop Dallas Trail Head and connection spur to the Silver Comet Trail.
- 23. Utilized LCI study recommendations for Dallas and Hiram.
- 24. Create more public access points to the Silver Comet trail especially in areas convenient to residential and commercial areas. This will allow people to use the trial more conveniently as a functional path.
- 25. Increase marketing of Silver Comet Trail to residents and visitors. Provide maps in all businesses along the trail and at access points. Provide more descriptions of points of interest along the trial on maps. Build a sense of pride for the residents about this wonderful asset in their community and spread the word to people outside of Paulding.
- 26. Within the Dallas and Hiram downtown districts plan for grid patterned developments with sidewalks in a minimum of a half-mile radius around the downtown areas. Creates a more walkable environment in the central areas and also increases connectivity to surrounding neighborhoods.
- 27. Complete streetscaping in downtown Dallas and plan streetscaping in downtown Hiram (trees, planters, trash receptacles, lights and buffers.) Makes areas more appealing to downtown shopping. Provide shaded areas for downtown shoppers.

- 28. On a countywide basis including the Cities of Dallas, Hiram, and Braswell, require or continue to require developers to include sidewalks and trees within residential subdivisions and commercial developments. This encourages residents to walk within their neighborhoods.
- 29. New residential subdivisions should be required to limit cul-de-sacs and should connect to existing subdivisions and commercial nodes though walking paths.
- 30. Within downtown areas and commercial nodes, prioritize investments in older corridors that have the most potential to be used by pedestrians areas adjacent to stable neighborhoods and higher population density. Increases walkabilty in neighborhood centers and downtown areas.
- 31. Within downtowns and commercial nodes, require and invest in pedestrian amenity zones with crosswalks and safety features. Increases safety for pedestrians and drivers. To make pedestrians feel more comfortable in high traffic areas.

#### **Community Facilities and Services**

#### Issues

- 1. Public sewer services are currently being studied as a result of tremendous residential growth over the past ten years. Local officials are concerned with future sewer capacities for all types of development including commercial, industrial and residential. Plant expansions, new plants, and/or service agreements with adjoining counties will become essential for continued development within the county and cities.
- 2. Public water distributions system must be improved to support anticipated future growth. This includes adequate water pressure at peak times during peak seasons.
- 3. Age distribution within Paulding County identifies sustained increases in school aged children. Impacts on the School System will include the construction of numerous new schools to maintain capacity and meet state requirements.
- 4. The mechanism for state funding of new schools and related facilities does not support fast growing counties.
- 5. Coordination of new school facilities planning with Paulding County in an effort to minimize infrastructure needs including traffic impacts, water, and sewer services.
- 6. Growth impacts on emergency services (including E-911 services) have led to the need to hire additional personnel, purchase new equipment, construct new facilities and improve current facilities.

- 7. The county and cities must continue to plan recreation facilities and program expansion to support anticipated population growth. These expansions are costly and require additional personnel to operate and maintain. Additional recreation facilities are needed currently in the north-central and southern portions of the county.
- 8. Growth within the county over the past 10-15 years has increased the need to expand and/or construct new healthcare facilities such as a new hospital in an effort to provide adequate care to the citizens.
- 9. Government services including court services will also continue to be impacted by growth requiring new facilities, services, and personnel.
- 10. Other growth impacts have included jail and detention facilities, animal control facilities, senior citizen services, and personal care/nursing homes.
- 11. Dallas and Hiram to consider water well projects.

## **Opportunities**

- 1. Support Wellstar Hospital's new facility in Hiram. The new hospital will have up to 250 beds.
- 2. Support Wellstar Hospital's expansion of current facilities, as a skilled nursing unit
- 3. Develop and implement sewer system plan completed in 2006.
- 4. Develop an updated water system plan including new infrastructure and maintenance programs.
- 5. Require developers to upgrade infrastructure and services (transportation, water, wastewater, and schools) to off-set impacts of their development through regulations and/or zoning approval conditions.
- 6. Participate and fund the construction of new recreation facilities in the northern and southern portions of the county to support population growth.
- 7. Continue to support the Paulding County School System in addressing the location of new facilities in relation to anticipated residential growth areas and in areas serviceable by County infrastructure.
- 8. Include impacts on the School System in growth management decisions.

- 9. Update the Strategic Emergency Services Plan for anticipated needs for facilities, service expansion, and equipment to support continued residential and business growth.
- 10. Allow for community facilities to be located in the downtown or in neighborhood centers. Placing important community facilities close to residential/commercial nodes or centrally will increase accessibility. This will also create a diverse mix of activities in downtowns and neighborhood centers.
- 11. New and/or updated wastewater plant(s) for the City of Dallas.
- 12. Expand emergency siren system throughout Paulding County and the Cities of Dallas, Hiram, and Braswell

### **Intergovernmental Coordination**

#### **Issues**

- 1. A portion of the eastern half of Paulding County is now classified as an urban area based on 2000 Census data.
- Paulding County is located within the Coosa Valley Regional Development
  Center area, but must comply with the Atlanta Metropolitan Planning
  Organization (Atlanta Regional Commission ARC) regarding transportation
  planning and clean-air standards. Transportation projects, which involve state and
  federal funding, must be included the ARC's regional Plan and Transportation
  Improvement Program.
- 3. Paulding County is within the Metropolitan Region for Developments of Regional Impact (DRI). Therefore Metropolitan standards apply to all developments in Paulding.
- 4. Paulding County also participates in the ARC's Regional Plan update process.
- 5. Developments of Regional Impact must also comply with Georgia Regional Transportation Authority (GRTA) processes, regulations, and recommendations.
- 6. Paulding County and its cities have made numerous amendments to their respective code of ordinances and the development regulations regarding stream buffer protection, floodplain management, storm water runoff, and conservation residential developments. These amendments were required by the Metropolitan Georgia Metropolitan Water Planning District of which Paulding County is a member.

- 7. Paulding County is a member and participates in the National Fish and Wildlife Administration's Etowah Conservation Plan (ECP) development and requirements. The ECP will require implementation of protection measures for all streams in Paulding County that lie in the Etowah Watershed. The primary purpose of the Plan and regulations is to protect endangered Darter fish habitats from illicit discharges and litter. The City of Dallas has also adopted the ECP as its preferred plan.
- 8. Paulding County, Dallas, Hiram and Braswell have Service Delivery Agreements in place. There agreements will be reviewed and updated as part of the 2006 Comprehensive Planning Process.
- 9. Inter-governmental agreements between Paulding and Cobb Counties have been negotiated for developments in both Paulding and Cobb for water and sewer services.
- 10. Coordination through the Chamber of Commerce and Industrial Building Authority, Cities and County regarding economic development.

## **Opportunities**

- 1. Continue to work with ARC and the Georgia Department of Transportation regarding state and federal funded proposed transportation improvements in Paulding County and the Cities of Dallas, Hiram and Braswell to ensure project funding, engineering and construction.
- 2. Review and update Service Delivery Strategies to limit duplication of services. (The update of the adopted Service Delivery Strategy will be completed as a part of this Comprehensive Plan)
- 3. Adopt recommended policies developed by the North Georgia Metropolitan Water Planning District and Etowah Conservation Plan regarding stream protection, storm water management, and conservation planning.
- 4. Coordination and participation between Paulding County, Dallas, Hiram and Braswell through the Industrial Building Authority to develop an economic development strategy with assistance from the State and other economic development agencies.
- 5. Include tourism as part of the overall economic strategy. Development of tourism / quality of life marketing plan to include: Market county assets to citizens internal marketing, Build partnerships with neighboring counties Carroll, Douglas, Cobb, Bartow, and Polk. Examples include the following: Soft product development i.e. develop packages for marketing purposes Collaborate with region multicounty- on marketing and advertising

6. Continue to support regional economic development including the participation with Douglas County with the Paulding-Douglass Joint Development Authority.

### **Land Use**

#### **Issues**

- 1. Local ordinances do not provide for mixed-use developments.
- 2. Availability of multifamily residential location in Cities of Dallas and Hiram.
- 3. Downtown areas of Dallas and Hiram may need to address possibilities for residential space above retail. Mixed use possibilities should be addressed in the Dallas LCI study.
- 4. Residential developments are proposed in areas with limited transportation access.
- 5. Residential developments have been approved in areas planned for future business and industry.
- 6. Many residential developments over 50 acres have impacted tree canopy areas due to mass grading of site.
- 7. Design standards for commercial developments including signage did not exist in the past, therefore no consistency is present for architectural commercial building design or signage along the County's commercial corridors.
- 8. Developments must consider and accommodate environmentally sensitive and historically significant areas.
- 9. Dallas and Hiram downtown districts must remain primary commercial nodes. Efforts to revitalize downtown areas must be continued with assistance from local business community.

#### **Opportunities**

 Future land use should identify the need for small town centers with neighborhood businesses around the communities of New Georgia, Yorkville, New Hope, and Braswell. Small town centers ensure local residents of each community has the benefit of living close to all amenities. It also gives each community its own sense of place. This encourages appropriate growth in these areas. It enables residents to take advantage of all conveniences of living it their communities.

- 2. Follow recommendations in the Green print Plan prepared by The Trust for Public Land and Integrated Science and Engineering. Build tourism around Wildlife Management Area. Use hiking, bird watching, primitive camping, canoeing, fishing, and hunting.
- 3. Continue to promote conservation areas or space to provide greenspace, parks, stream buffers and green buffers between non-compatible land uses.
- 4. Identify and designate scenic byways linking all of the town centers and neighborhood centers. Will protect and preserve the scenic quality of the rural roadways in the community. This is a designation along selected rural highway corridors that is intended to preserve the views (pastoral, forest, and rolling hills) of the natural and rural landscape. A corridor management plan is developed for each Scenic By-Way, setting forth guidelines, incentives and regulations to be employed to protect and enhance views of the scenic landscape from the road.
- 5. Continue to implement the Highway Corridor Overlay District, which sets architectural, site, and signage standards for all new developments along identified corridors.
- 6. Develop and implement a quality residential development overlay district to set standards on new residential developments in the form of architectural standards, mixed lots sizes, no mass grading, greenspace requirements, trails, wildlife movements, streetscapes, street grids, and connectivity.
- 7. Continue to support current agri-business throughout the county through development and zoning standards.
- 8. Amend zoning regulations to incorporate a senior living / assisted living zoning category and a mixed-use (commercial and residential) zoning category.
- 9. Continue to update the Future Land Use Map as infrastructure expands to stay consistent with current and anticipated growth trends.
- 10. Continue to require inter-connectivity (vehicle and pedestrian) between developments both commercial and residential.
- 11. Consider historically significant structures and areas in land use decisions by utilizing the historic resources survey prepared by the University of Georgia for Paulding County in 2006.
- 12. The City of Dallas may consider participating in the Main Street/Better Home Town Program. The Main Street/Better Home Town program can provide:

  Assistance that the city does not have in place at this time. Help with the business

mix in Downtown Dallas. (A majority of the tenants in Downtown are business/services related). Participation by Dallas in the LCI study.

- 13. Downtown Dallas could benefit from a parking management plan that emphasizes designating plentiful existing off street lots with distinctive parking signage. The plan should also utilize educational brochures in a sustained parking education campaign to direct employees, owners, and customers to parking lot options and inform them about parking regulations and enforcement.
- 14. Hiram should consider developing a pocket park around the Silver Comet Trail. Additional green space adds to the attractiveness of this amenity. Downtown residents and visitors will find this a great amenity. Downtown Hiram has the potential to develop into a great place with adequate planning based on the large amount of infill spaces available.
- 15. Hiram should review and update zoning of Downtown area. As Downtown Hiram grows it will be able to grow smartly. Growing smartly is a key in any Downtown and it is important for the possible infill spaces in Downtown area. Hiram to be zoned with the sensitivity of existing Downtown residential and commercial.
- 16. Downtown Hiram could benefit from design guidelines to protect the few existing historic buildings and to guide new construction in the downtown area. Design standards provide benefit by protecting and increasing property values and revenues. In addition to the economic benefits for property owners and local governments, the design guidelines will help provide and protect the unique sense of place that Hiram has.

## 3.0 Analysis of Existing Development Patterns

#### **Existing Land Use**

Identifying and analyzing the existing land use in Paulding County and the Cities of Dallas, Hiram, and Braswell provides local governments the opportunity to inventory existing land use patterns and trends; to determine future patterns of growth, based on community needs and desires; and to develop goals, policies and strategies for land use that strike a balance between effective and efficient delivery of public services, protection/preservation for vulnerable natural and historic resources, and respect for individual property rights. The existing land use map illustrates issues and opportunities regarding growth trends and development patterns. The existing land use also takes into consideration the influences of the County's transportation system.

The following Table (LU-1) identifies land use coverage in Paulding County by category including Commercial, Industrial, Public/Institutional, Transportation/Communications/Utilities, Park/Recreation/Conservation, Agricultural/Forestry and Undeveloped/Vacant.

#### Table LU-1. Existing Land Use Distribution (1991, 2001)

Land Use Type		1991		2001			
	Acres	% Of Total Area	% Of Developed Area	Acres	% Of Total Area	% Of Developed Area	
Agricultural	25,751	13.0	61.0	18,369	9.2	20.6	
Commercial	870	0.4	2.0	2,146	1.1	2.4	
Industrial	320	0.2	0.7	1,051	0.5	1.2	
Residential	13,927	7.0	33.0	61,000	30.4	68.4	
Parks/Rec./Community	1,564	0.7	3.3	6,588	3.3	7.4	
Total	42,432	21.0	100.0	89,154	44.5	100.0	
Vacant/Undeveloped	158,272	79.0		111,550	55.5		
Total Acreage	200,704	100.0		200,704	100.0		

Source: 1991 Paulding County Comprehensive Plan, ARCADIS G&M, Inc., The Georgia County Guide – 2000, University of Georgia, Planning & zoning Division

Analyzing existing land use trends and patterns is one of the most critical elements contained in the Comprehensive Plan. Land use is interdependent with all other elements and it is very important to coordinate all the other elements with land use. Optimal land use efforts must be focused on the balancing of individual property rights with the needs and desires of the community overall. Any decisions on the use of land today have long lasting ramifications, which must be considered.

Land use is the critical factor in the comprehensive planning process. The ways in which land uses are distributed will have a profound effect on all other major systems including community facilities and transportation. Land uses that are too dispersed and separated by use group will lack efficiency related to energy, extension of utilities, sense of community, and social interaction. Land uses developed too densely may create crowded roads, overuse of utilities, poor air quality, as well as unhealthy conditions as a result of insufficient open space and green areas.

As Paulding County and the Cities of Dallas, Hiram and Braswell continue to grow at a phenomenal pace, it is very important to analyze current land use patterns in an effort to achieve the desired, balanced growth everyone appreciates and has come to expect.

Over the past fifteen years, Paulding County and the Cities of Dallas, Hiram and Braswell have experienced tremendous population and housing growth. This trend is expected to continue as well as the development of supporting commercial growth. Leadership of the County is also pursuing industrial development in an effort to create more jobs closer to home. A Greenspace Plan has also been developed and adopted for Paulding County as a part of the State's Greenspace program. The Plan identifies greenspace areas throughout the County that are permanently protected or are proposed for permanent preservation.

The existing land use inventory includes an existing land use map, which is included as a part of this Comprehensive Plan – Community Assessment.

#### **Assessment**

The following is an assessment of existing land uses in Paulding County, which consist of a descriptive analysis of existing land use and current land use trends. The 2006 Existing Land Use Map is attached and is part of the Community Assessment.

In Paulding County, undeveloped / vacant land is the largest land use within the county. Over the past ten years, the amount of undeveloped / vacant land has decreased as a result of residential and commercial growth. This trend will continue over the next ten to twenty years as the population for Paulding County is projected to more than double from the 2000 population of 81,678 to 247,958 in 2030. Concerned with anticipated growth, County Leaders have adopted a Greenspace Plan as part of the State's Greenspace Program to preserve 20 percent or 40,243 acres of the county in protected greenspace areas. The Greenspace Plan is considered part of this Comprehensive Plan and should be included in policy-making decision as well as future land use, ordinance development or updates, development regulation updates and residential, commercial, and industrial site plan review. Also, the Greenspace Plan identifies the Wildlife Management Area, City of Atlanta property (currently leased to the Georgia Department of Natural Resources), Silver Comet Trail, and the historic Pickett's Mill site as to remain preserved areas. Paulding County, State and Federal agencies are also working together to preserve over 7,000 acres of greenspace. The effort would include forest and stream protection as well as provide additional buffers along the Silver Comet Trail. The greenspace would also be incorporated into the Paulding Airport, Technology Park and Village Master Plan.

The most intense residential development has occurred in the eastern portion of the county including the Cities of Dallas and Hiram where transportation access to employment areas and services remains the greatest, where water and sewer are available, and where affordable land prices compared to those in the north Metropolitan Atlanta area continue to exist. As stated in the Housing Chapter, Paulding County is expected to add nearly 34,000 new residents by 2011. In order to accommodate the increase in population, 12,000 new housing units are projected to be constructed within the next five years. This trend is expected to continue over the next twenty years with a gradual push westward as infrastructure and land become available. The anticipated residential growth will be primarily in the form of detached, single-family housing within planned residential developments and standard subdivisions with densities not exceeding three units per acre with public water and sewer. It is important to note that community goals do not support the development of multi-family housing to meet the needs of future populations.

Commercial land uses are expected to continue to grow. Commercial development will continue to develop over the next twenty years to support the anticipated population increase. Most of the commercial development within the past ten years has been in the form of retail and service establishments. The commercial growth primarily took place in the eastern portion of the county along the major transportation arterials. This trend is expected to continue over the next twenty years with a gradual push to southern and western Paulding County as the population growth increases in the those parts of the

county. These developments will be mostly in the form of neighborhood type retail and service establishments. Although there is an increasing need for these businesses, careful review should be made by county officials on an individual basis to ensure compatibility with the surrounding land uses. The use of landscaping and buffers should be stipulated as deemed necessary in an attempt to uphold the rural character in many of the potential neighborhood commercial locations. The County's Zoning Ordinance, Development Regulations, and site plan review will continue to be important in establishing compatibility standards for all commercial development within the county. Again, the use of landscaping, buffers, building appearance, and underground utilities are important tools in protecting residential areas from the intrusion of new commercial land uses. The Zoning Ordinance's sign regulations will be updated to provide more restrictions on billboards and signs to limit impacts on adjacent residential areas as well as limit number of billboards along highways and other thoroughfares. Permitted locations, size limits, distances between billboards, and landscaping should be considered.

Industrial land uses are planned to increase over the next ten to twenty years. County leaders are currently developing strategies to attract new industry. The effort is to bring jobs to Paulding County citizens and expand the county's economic base. At the present time, approximately 75 percent of the county's work force commutes to other counties for employment. The strategies include the development of a new industrial park located in association with the Paulding County Airport Project, supporting private industrial development, marketing the County's trained work force, and expanding water and sewer capacities to handle industrial development. Over the past ten to fifteen years, industrial development has occurred in the County's industrial park northeast of Dallas and in or near the Cities of Dallas and Hiram with access to U.S. 278. As noted above and throughout the Plan, current and short-term future water and sewer capacities should be reserved as necessary for anticipated industrial and commercial developments, not large multi-family residential uses. The push for industrial development is expected to continue over the next twenty years. County officials and leaders will continue to work through the Chamber of Commerce and the Industrial Building Authority to exploit all possibilities for industrial growth.

Agricultural land uses will continue to decrease through 2026, as the feasibility to operate a farm decreases, land prices go up, and pressure of residential growth continues. At the present time, agricultural land uses are scattered throughout the county with the majority being located in the western and southern portions of the county. Agricultural land uses in the western and many southern portion of the county will remain over the next ten years, as residential growth will increase at a slower pace in these areas. Most of the agricultural uses will continue to include cattle farms, horse farms, and pasture.

As Paulding County's land uses change to include more suburban characteristics, it is important for county officials to continue to update the existing land use map, Future Land Use Map, Zoning Ordinance, Development Regulations and this Comprehensive Plan in an effort to provide for more harmonious, balanced growth, while protecting greenspace areas and the quality of life.

## 4.0 Areas Requiring Special Attention

After reviewing and analyzing existing land use patterns in Paulding County and the Cities of Dallas, Hiram and Braswell, the following areas have been identified as areas of special need due to impacts of residential and commercial growth. These special need areas must require additional protection measures to ensure impacts of growth are minimized. These areas are identified in the attached maps in the Technical Addendum

### **Special Need Areas**

- 1. Significant environmental sensitive areas such as floodplains, streams, groundwater recharge areas, watersheds, wetlands, and steep slopes.
- 2. Public sewer basins are being studied for growth impacts on remaining sewer capacity and future service.
- 3. Southeastern portion of the county included in a Quality Growth Overlay District to require additional residential development standards due to two proposed large planned residential developments.
- 4. Wildlife Management Area, Picketts Mill Historical site, and current and/or proposed permanent greenspace areas.

#### 5.0 Character Areas

The use of character areas in planning acknowledges the visual and functional differences of varying neighborhoods and allows for intentional guidance of future development through adequate and specific planning and implementation. Character areas are geographic areas of a community that share unique characteristics or have a potential to evolve as a unique area. The Character Area Map is attached. The following are identified Character Areas with descriptions in Paulding County including the Cities of Dallas, Hiram, and Braswell.

**Conservation Area, Greenspace:** Undeveloped, natural lands with significant natural features including views, steep slopes, floodplains, wetlands, watersheds, wildlife management areas and other environmentally sensitive areas not suitable for development of any kind.

**Linear Greenspace, Trails and Pedestrian/Bikeways:** Area of protected open space that follows natural and manmade linear features for recreation, transportation and conservation purposes and links ecological, cultural and recreational amenities.

**Rural Residential Area:** Rural, undeveloped land likely to face development pressures for lower density (two units per acre or less) residential development. Typically will have low pedestrian orientation and access, very large lots, open space, pastoral views and high degree of building separation.

**Suburban Areas:** Area where pressures for the typical types of suburban residential subdivision development are greatest (due to availability of water and sewer service).

Without intervention, this area is likely to evolve with low pedestrian orientation, little or no transit, high open space, high to moderate degree of building separation, predominantly residential with scattered civic buildings and varied street patterns, often curvilinear.

**Traditional Neighborhood Areas:** Residential area consisting of Suburban Residential (R-2) zoned land that occurs primarily to the east of State Route 61 and south of U.S. 278, and is experiencing typical suburban residential development. This area requires development to occur in a compact form that includes development elements of traditional neighborhood design, such as girded, narrow streets where possible; sidewalks and street trees; neighborhood open space (i.e. pocket parks); connectivity to adjacent residential and commercial developments, the Silver Comet Trail and proposed county trails. Design standards will address architectural styles; facade materials, private open space; and garage/drive orientation.

Corridors (Gateway, Scenic, Major Highway): Scenic Byways exist along U.S. 278 (west of SR 61), Braswell Mountain Road, SR 101 S and SR 120 (west of SR 61). These Byways are currently rural in character, yet are facing uncontrolled residential and commercial development in the future. View sheds and forested areas must be protected to maintain the rural heritage of the county. Regulations along these Byways include signage; buffers and landscaping; building orientation; trails and connectivity; view sheds; drainage and vehicular access. **Protected Corridors** include U.S. 278, all State Highways, Macland Road, Ridge Road, Bill Carruth Parkway, the proposed Airport Road and the proposed Seven Hills Parkway extension. These corridors have experienced different degrees of residential, office or commercial growth, and are the major corridors into the county. Therefore, the design and development of future growth will re regulated to improve the aesthetic appearance and uses along these roadways. These corridors will have controls for signage; buffers and landscaping; building design; connectivity; view sheds; drainage and vehicular access.

**Crossroads Community:** Crossroad community corresponds with rural intersections throughout the county that may include or is anticipated to include commercial uses. These areas should retain a small, nodal size and promote mixed-use developments at a neighborhood-scale.

**Neighborhood Centers:** Neighborhood Centers corresponds with existing county areas of New Hope, Crossroads, New Georgia, Union, Yorkville, Sweetwater Church/SR 92, Bakers Bridge/ Ridge/ Dallas-Nebo intersection and the proposed East Paulding commercial areas. These areas are appropriate for mix-use developments that provide neighborhood-scale services for surrounding residents. The Neighborhood Centers will have design and development standards to regulate land uses; architecture; building massing and orientation; parking; vehicular and pedestrian access; streetscape and signage; landscaping, etc. These centers are to remain nodal in size.

**Town Centers:** Town Centers are the existing municipalities of Dallas, Hiram and Braswell. Each Town Center is appropriate for mixed-use development at a higher density, yet incorporation a pedestrian scale in the treatment of building orientation and walkability. These areas should be the focus for new commercial, office and residential

development in the county. Each Town Center will have design and development standards to regulate land uses; architecture; fenestration; building massing and orientation; parking; vehicular and pedestrian access; streetscape and signage; landscaping, etc. Each Town Center should include gateways and way finding, and be linked to one another; neighborhood centers and the Silver Comet Trail via proposed county network of greenspace and trails.

**Business Corridors:** Developed and undeveloped land on both sides of designated high-volume transportation facilities, such as retail roads and highways where commercial and service businesses have or are anticipated to occur. Corridor Overlay standards have been adopted by the County which regulate architecture; site design, building massing and orientation; parking; vehicular and pedestrian access; streetscape and signage; landscaping. Business corridors include but are not limited to U.S. 278, Marietta Highway (SR 120) Dallas-Acworth Highway, Hiram-Acworth Highway (SR 92), Hiram-Douglasville Highway (SR 92), SR 61 and Business Highway 6 (SR 6 Bus).

**Industrial Areas:** Land used in higher intensity manufacturing, assembly, processing activities where noise, particulate matter, vibration, smoke, dust, gas, fumes, odors, or similar characteristics are not contained on-site. Industrial uses in Paulding County are located primarily in the County's industrial park northeast of Dallas, in Dallas, and in eastern Hiram. One of the largest industrial uses is the rock quarry located in the southwestern portion of the county south of State Route 120

## 6.0 Consistency with Quality Community Objectives (QCOs)

In 1999 the Board of the Department of Community Affairs adopted the Quality Community Objectives (QCOs) as a statement of the development patterns and options that will help Georgia preserve her unique cultural, natural and historic resources while looking to the future and developing to her fullest potential. The Office of Planning and Quality Growth has created the Quality Community Objectives Assessment to assist local governments in evaluating their progress towards sustainable and livable communities.

This assessment is meant to give a community an idea of how it is progressing toward reaching these objectives set by the Department, but no community will be judged on progress. The assessment is a tool for use at the beginning of the comprehensive planning process, much like a demographic analysis or a land use map, showing a community "you are here." Each of the fifteen QCOs has a set of yes/no questions, with additional space available for assessors' comments. The questions focus on local ordinances, policies, and organizational strategies intended to create and expand quality growth principles.

A majority of "yes" answers for an objective may indicate that the community has in place many of the governmental options for managing development patterns. "No's" may provide guidance as to how to focus planning and implementation efforts for those governments seeking to achieve these Quality Community Objectives.

This initial assessment is meant to provide an overall view of the community's policies, not an in-depth analysis. There are no right or wrong answers to this assessment. Its merit lies in completion of the document and the ensuing discussions regarding future development patterns as Paulding County and the Cities of Dallas, Hiram, and Braswell undergo the comprehensive planning process.

See Adendum II for the Quality Community Objectives for Paulding County, Dallas, Hiram, and Braswell.

## DATA ANALYSIS

## Introduction

The table below illustrates a profile of Paulding County, the State of Georgia and the US as a whole. Sections that follow provide more in depth information and comparisons across a range of information. According to this brief overview, Paulding County has a younger population than Georgia and one considerably younger than the US as a whole. Paulding County's population is also much less ethnically diverse than either the state or the nation. Housing is more likely to be occupied (a lower percentage of vacant units) and the percentage of owner-occupied housing is also much higher than both.

In the sections that follow, more detailed data are provided by topic. Tables with raw data are presented for all sections and, in some cases, figures are calculated from tabular data to illustrate patterns or trends within the county and its municipalities. In many cases, data are also presented for comparison counties, the state of Georgia as a whole and the nation.

## Population Projections

Paulding County examined various estimates generated by the U.S. Census Bureau, , and the Atlanta Regional Commission. Some estimates placed too much weight on Paulding's long history as a rural, slow-growth county, thereby underestimating future population. Other estimates discounted Paulding's more recent growth patterns, resulting in a probable underestimation of future populations.

As an alternative, Paulding County used the projections developed by the Atlanta Regional Commission. The projections for the municipalities were developed by the Paulding County Community Development Department utilizing recent growth rates. The table below provides a summary of these results. The population figures for 1980, 1990, and 2000 are based on U.S. Census results for those respective years. The 2005 population is an estimate.

Paulding County Population, 1980-2005

r duraning county	Topulation, 1900	2005	
	TOTAL	<b>INCREASE</b>	PERCENT
	<b>POPULATION</b>		CHANGE
1980	26,110		
1990	41,611	15,501	59%
2000	81,678	40,067	96%
2005	112,411	30,733	38%

Paulding County Comprehensive Plan Community Assessment It should be noted that the ARC projected population of 111,338 for the year 2005 was approximately 1% lower than the estimate population total of 112,411 by the U.S. Census. The accuracy of this projection provides substantial confidence in the long-range validity of the forecasting model overall. Based on the actual 2000 Census population total of 81,678, the population of Paulding County more than tripled (313% growth rate) between 1980 and 2000. The population grew by 96% from 1990 – 2000.

Based on these projections, Paulding's population is expected to increase 64% during the first decade of this century to a total of 126,618 residents. It is expected to increase by another 75% between the years 2010 - 2030 to 221,839. By the end of that decade, the expected rate of population growth is slow, although the population will continue to grow substantially through the years. The overall growth rate from 2020 to 2030 is expected to be just 26%, by which time some 221,839 people are expected to be living in Paulding County. This figure represents a total population growth rate of 172% since the year 2000.

As the figure below illustrates, data from the Georgia County Guide shows that Paulding County has a very small proportion of residents living in rural farm areas. The largest proportion of residents live inside urban areas or in rural, nonfarm areas in 2000.

Population Growth in Paulding County's Municipalities

The other municipalities in Paulding County have not developed their own long-range population projections. For these other municipalities, the table provides population figures and projections for the years 1980-2030 developed by the Paulding County Community Development Department. Projections for the years 2005-2030 are based on the growth rates for each city between the years 1990-2005. These figures may not reflect the realities of recent changes in these communities and the county as a whole.

Population data presented below indicate significant anticipated growth in population in both Dallas (335% increase), Hiram (178%) and Braswell (330%) between the years 2000 and 2030. The unincorporated population of Paulding County will also have significant growth (160%) between the years 2000 and 2030.

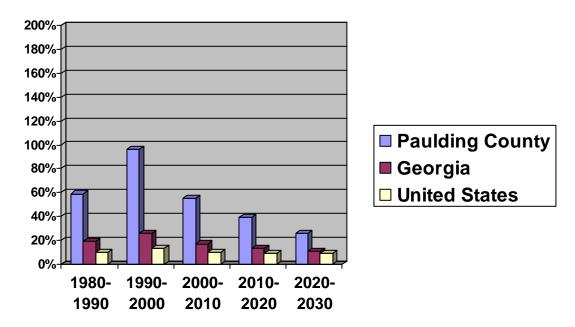

Population Projections for Municipalities, 1980 – 2030

	1980	1990	2000	2005	2010	2015	2020	2025	2030
Dallas	2,508	2,810	5,056	8,667	14,821	16,424	18,027	20,010	21,993

Source: US Census; ARC; PC

The figure below illustrates Census data and estimates on growth in the county, as compared with data and estimates on growth in the state as a whole and in the nation. Despite the concerns noted in the text above about underestimates in Census data for population growth in the county, it is clear that any data source projects growth at a rate higher than the state as a whole and/or the nation. These projections are much more likely to be accurate in the short term, where very strong growth in the county is forecasted. Longer term estimates on growth indicate a slowing of the rate of growth, but continue to project that the population will grow through 2030.

### **Age Distribution of Paulding County Population**

The table below provides population projections for different age cohorts through the year 2030 for Paulding County. These projections are based on U.S. Census data from the year 2000. Not surprisingly, significant increases are expected in all age groups countywide between the years 2000 and 2030, although the increases are significantly larger for some age groups compared to others. According to these figures, for the county as a whole, the senior population (ages 55 and older) in Paulding County is projected to increase by approximately 150% between the years 2000 and 2030. The number of school age children (ages 5-17) is projected to increase by at least 162% during that same time period, although the vast majority of this growth is expected to be occur among children ages 5-13. The number of adults ages 35-54 is expected to increase some 188% over this period. It should be remembered that local officials believe the U.S. Census estimates generally underestimate population increases over the next 25 years, so growth rates could be even higher.

The figure below illustrates the growth of the population over the age of 65 in Paulding County. While the numbers of seniors will increase, they will represent a smaller segment of the population in decades to come in the county and its municipalities.

Growth of Population over 65, 1980-2030

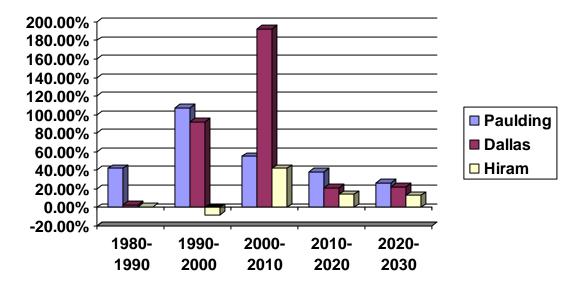

Source: US Census; PC

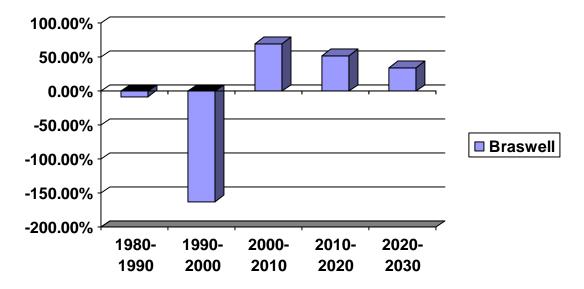

Source: US Census; PC

Like the senior population, the proportion of residents under 18, will decline in Paulding County. The figure below illustrates the projections of growth and decline of the proportion of residents under the age of 18. Note that a decline in the proportion of an age group does not necessarily mean that the overall number of residents will decline, just the percentage of residents who fit within any group. Therefore, even in areas where growth is slow or growth declines, the overall number of residents may increase as the total number of residents increases. Taken together, the figure below and the figure above illustrate a young population in the county for the years projected.

Growth of Population under 18, 1980-2030

### Race/Ethnicity

The table below provides population figures and projections for members of different races for the years 1980-2030. The white population in Paulding County is expected to increase by 168% between the years 2000-2030. The African-American population is expected to increase 193% during this same time period. Members of other racial groups are expected to increase dramatically by 2030.

As is the case for many counties in Georgia, Paulding is expected to have larger than proportional increases in the Hispanic/Latino population when compared to other ethnic groups. The table below provides population figures and projections for the Hispanic population in Paulding County and its respective municipalities for the years 1980 – 2030. For the county as a whole, the Hispanic population is expected to increase 215% between the years 2000 and 2030. Similar increases, with some degree of variability, can be expected in each of the cities. Similar increases, with some degree of variability, can be expected in each of the cities.

The growth in the number of Hispanic residents in the county and municipalities is illustrated in the figure below. Population estimates are made for years after 2000, and the actual rate of growth may be higher than these estimates. By any measure, it is clear that the number of Hispanic residents in the county is expected to dramatically increase.

#### **Number of Households**

Countywide, the number of households in Paulding County is expected to increase by at least 173% between the years 2000 and 2030. The number of households in Dallas is expected 356% during that time period. Significant increases are expected in most of the other cities. Projections for these cities are not likely to be accurate however, as it is unlikely that the county will grow without increases in the smaller municipalities. Projections for these cities are not likely to be accurate however, as it is unlikely that the county will grow without increases in the smaller municipalities. These figures may be suspect in that Census estimates for small municipalities may not fit forecasting models used by the Bureau of the Census.

#### **Average Household Income**

Median household income in Paulding County increased 58% between the years of 1990 and 2000. The rate of increase ranged from a high of 72% in Dallas and Hiram to a low of 25% in Braswell. Dallas and Braswell significantly lag behind household incomes in other parts of the county. The rate of increase in average household income in Paulding County during this period exceeded the increase in the state of Georgia as a whole.

#### **Distribution of Income**

The table below provides a breakdown of the changes in the distribution of household income for the years 1990 and 2000. In 1990, 54% of the households in Paulding County had incomes of \$35,000 or less. By 2000, that percentage had dropped to 27% of the total number of households in the county. Only 12% of Paulding County households had incomes of at least \$60,000 in 1990, compared to 47% of the households in 2000.

#### **Educational Attainment**

Paulding County has a county wide school system. As is the case across the state, dropout rates are an area of concern. Chattahoochee Technical College, located within the county, is a significant asset. Moreover, numerous colleges are located within commuting distance, offering Paulding residents more opportunities for post-secondary education. Educational attainment estimates for 2005 indicate that 72% of the population has a high school degree or less, 15% hold bachelors degrees and 6% hold masters or more advanced degrees. These figures are below national averages in educational attainment.

The table below provides figures and projections related to educational attainment for the years 1980-2030. The number of Paulding County residents who do not have a high school diploma is expected to increase by 62% between the years 2000 – 2030, while the number of residents with at least a four year college degree is expected to increase by 121% during that same time period.

## **Economic Development**

### **Employment By Industry**

The following table provides figures and projections for levels of employment in various industry types between the years 1980-2000. As a percentage of total employment, employment in the manufacturing industry has had the most significant decline between the years of 1980 and 2000, from 28% of the total workforce in 1980 to just 13% in 2000. Relative levels of employment has increased the most significantly during that same time period for professional, scientific, management, administrative and waste management services (3% to 13%), wholesale trade (4% to 8%), and educational health and social services (11% to 22%). Relative changes in other industry types are projected to be less pronounced. Projections for the years 2005-2030 show the trend continuing towards service and knowledge based jobs.

#### Personal Income

The following table provides figures for personal income by type of income for the years 1990 – 2000. Perhaps the most striking results in this table are in regards to income derived from wage or salary income. That figure increased by 418% between the years 1990 and 2000. For Paulding residents as a whole income from aggregate wage or salaries increased from about 77% to 84% of the total personal income in 2000.

2000

#### **Labor Force**

The following table indicates that the number of residents who also work in the county increased by about 100% between the years 1990 and 2000, the percentage of workers residing in Paulding County who also work in Paulding County remained about the same between the years 1990 and 2000 (24.9% to 25.0%). According to the figures below, approximately 75% of the total workforce works outside the county. This is representative of a lack of employment offerings for Paulding workers. Proximity to the metro Atlanta area offers opportunities for Paulding residents as approximately three-fourths of the labor force works in a county other than Paulding.

As the figure below illustrates, labor force participation in Paulding County was higher that rates of participation for the state of Georgia and for the US as a whole. These data indicate that workers in Paulding are able to find employment at higher than average national and state rates.

Labor Force Participation, Paulding County, Georgia and US 1990-2000

### **Economic Segmentation**

The table below illustrates major sector private employment, sales and establishments within Paulding County in 2002. As this table indicates, the county is dominated by manufacturing interests, wholesale and retail trade. Industry descriptions within the table are provided by NAICS codes established by the US Department of Commerce.

NAICS	Industry Code	Total	Annual Payroll	Number of
code	Description	<b>Establishments</b>	(\$1,000)	<b>Employees</b>

#### **Economic Resources**

In addition to collaboration with various Chambers of Commerce in the area, the county is engaged in a number of economic development initiatives. These include the Industrial Building Authority, Airport Authority, and City of Dallas. These authorities focus much of their efforts on business recruitment.

In 2003, the county, municipalities, school districts and major businesses collaborated on a strategic planning process including public hearings, stakeholder meetings, and resulted in the establishment of goals, objectives and clarification of priorities for the county as a whole through an updated Comprehensive Plan.

## **Economic Trends**

Employment Change by Sector, Paulding County 1990-2004

Sector	Employment, 1990	Employment, 2005	Employment Change	Percent Growth, 1990 - 2004

Source: Georgia County Guide

Using the table above, a brief economic analysis can be performed using tools available at the University of Georgia sponsored website www.georgiastats.uga.edu. The discussion that follows is based on outcomes of analyses conducted using that tool.

During the period 1990 to 2004, employment in Paulding County increased by 11,356 jobs. In terms of employment growth, the most important industry was Education and Health Services (2,690 jobs). It is followed by Trade, Transportation, and Utilities (2,670 jobs), and Leisure and Hospitality (1,596 jobs).

## Major Employers

As the above discussion indicates, educational systems and local government are major employers. The county retail and healthcare sectors provide services for more rural surrounding communities.

#### Recent Business Initiatives

The Paulding County Industrial Building Authority (IBA) is a development authority responsible for supporting, growing and maintaining the tax base in the county. To that end, the IBA in association with the Chamber of Commerce, County Commissioners, Airport Authority and each of the Cities have been aggressibily promoting business opportunities in Paulding County, the development of incentives, development of the Paulding County Airport, and Airport planning area master plan.

# Housing

# Types of Housing

The table below provides a summary of the types of housing found in Paulding County and surrounding counties for the years 1980 - 2000. The total number of dwelling units in the county nearly tripled between 1980 and 2000. The percentage of single unit (detached) dwellings also increased significantly between 1980 and 2000 (from 81% to 86%). The number of mobile homes more than doubled between 1980 and 2000 but the relative balance of mobile home dwellings decreased from 13% to about 9%.

Projections on the proportion of single family detached homes in Paulding County remain relatively constant, as depicted in the figure below. Projections indicate that there will be no increases in housing density with a decrease in the number and proportion of mobile homes. However, the overall number of housing units as well as the overall number of single family homes will increase substantially.

# Age of Housing

The table below illustrates the age of housing stock in Georgia, selected comparison counties, Paulding County and its municipalities, using 2000 Census housing data. Approximately 8.5% of all housing stock in Paulding County was built prior to 1950. Comparable figures for the state of Georgia as a whole indicate that a significantly smaller percentage (20 percent) of housing stock statewide was built prior to 1950.

# Occupancy Characteristics

The table below provides a summary of the occupancy characteristics of housing units in Paulding County for the years 1990 and 2000. The data indicate that the percentage of housing units that were vacant decreased during this period, from 6% to 4% of all units. The percentage of owner-occupied units increased during this period from 77% to 83%.

# **Housing Costs**

A summary of the median property value and median rent for the years 1990 and 2000 is provided below. The data indicate that median property values increased almost 64% during that decade, while median rents increased from \$337 in 1990 to \$628 in 2000, an increase of 86% during that 10 year period. As is noted in other data presented below, Paulding remains a relatively inexpensive place to live within the metro Atlanta area, but rising housing costs deserve attention from area leadership.

# Cost-Burdened Housing/Jobs Housing Balance

Information on the number of households affected by cost-burdened housing is presented in the following table. Cost burdened housing reflects the number of households that spend more than 30% of their household income on rent or mortgage payments. Of all households included in the analysis, about 19% of all Paulding households contribute more than 30% of income to housing costs. This is lower than the average for the state, where over 20.6% of all Georgia households contribute over 30% of income to housing.

The following table illustrates availability of affordable housing in Paulding and other counties. Data in this table are created using a ration of median household value and median household income. The column on the far right is a ratio of the community ratio to that of the nation as a whole. Paulding's ratio compares favorably to the national ratios and to that of the metro Atlanta area. This table is taken from data available at www.demographia.com, which provides data on housing and quality of life indicators across communities.

Housing Affordability, Paulding County and Selected Comparison Counties, Metro Atlanta Average and National Average, 2000

# Special Housing Needs

In 2000, the county reported 11,590 residents over age 5 with disabilities (15.8 percent of the total population), ranking it 9th of the 159 counties. The proportion of persons with disabilities within age groups increases for those aged 65-74, where 43.7% of the population is reporting disability and for those aged 75 or older, where 63.9% report disabilities. In 2004 Medicare aged and disabled enrollment for the county was 5,331 persons.

Source: Georgia County Guide

Since some special housing needs data is not directly available, indirect assessments of housing needs for special populations can be made using data related to financial and social welfare payments. The figure below illustrates an indirect measure of persons in the county with special housing needs.

Selected Government Payments for Paulding County, 2005

Benefit	Amount	%
Food Stamps	4,763,760	9.5
Medicaid	34,279,702	68.6
TANF	350,986	0.7
OASDI	10,143,000	20.3
SSI	464,000	0.9
Total	50,001,448	100.0

Source: Georgia County Guide

Data are not available on the number, if any, of migrant farm workers residing in Paulding County, or on their housing needs. Direct information on housing for persons recovering from substance abuse is also not available, although data indicate that the county includes 1,008 active probationers, 40.1% of whom have been convicted of drug related/DUI crimes. Approximately 19.6 percent of active probationers are female.

# Housing Overcrowding

The following table provides a summary of overcrowded housing conditions, defined as dwelling units in which the average number of residents per room is greater than one, for the years 1990 and 2000. For Paulding County, the data suggest that the relative percentage of housing units that can be classified as "overcrowded" has decreased slightly between 1990 and 2000 (3.0% and 2.3%, respectively).

Housing Overcrowding for Paulding County, 1990

	Paulding County	Dallas	Hiram	Braswell
Total Occupied Housing Units	14,326	1,040	476	96
More than 1 Person per Room Source: US Census	423	48	16	2

## Barriers to Affordable Housing

Paulding County's millage rate was 24.53 in 2005 ranking 51<sup>st</sup> out of 159 counties. The county ranks 18th of all 159 counties on net property and utility digest, as calculated by the Georgia County Government Yearbook for 2005. Median gross rental costs are \$628, slightly above the state average of \$613. Median costs to own a home in Paulding also compare favorably to statewide data, at \$106,100 and \$111,200, respectively. Mobile homes represent about 8.7% of all housing units in the county in 2000, a lower proportion than the state as a whole, where mobile homes represent 12% of all households. This ranks Paulding 142<sup>nd</sup> out of 159 counties.

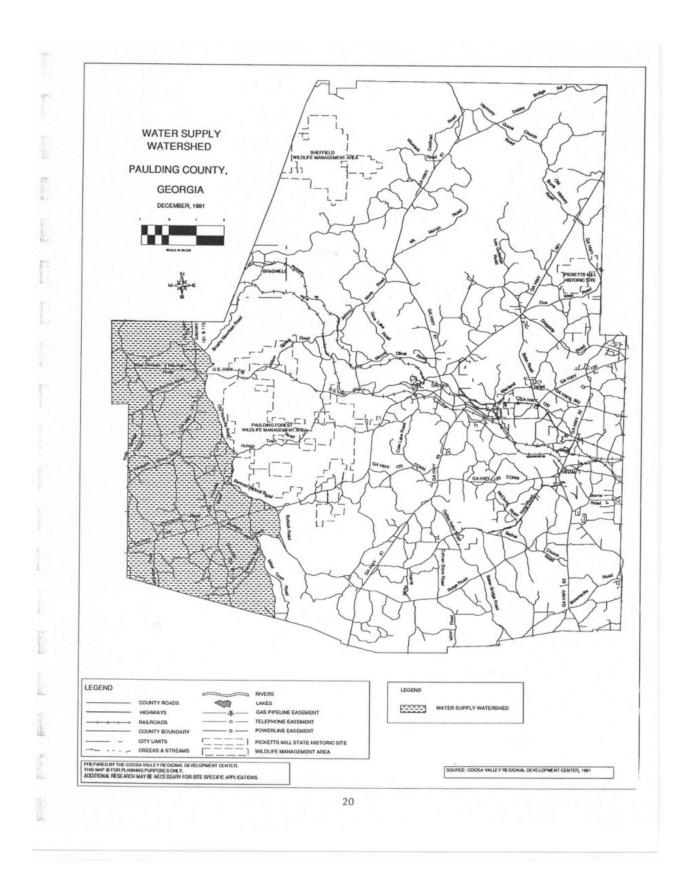

Land values in Paulding County are also rising. The Georgia County Guide places Paulding  $22^{nd}$  among the 159 counties in Master Economic Rank. This ranking is achieved by using the adjusted gross income reported on Georgia tax return, the local option sales taxes distribution from the state and assessed property and utility values. Paulding improved its ranking from  $30_{th}$  to  $23_{rd}$  since 1997. Assessed property value (at 40% assessment) for the county was \$3,285,601,673 in 2005, an increase of 15.4% from 2004. These data are good news for tax rolls, but may be slight indications of concern for lower income housing. As the overall picture of land values improves in the county, homes become more expensive.

# Mapping of Significant Natural and Cultural Resources

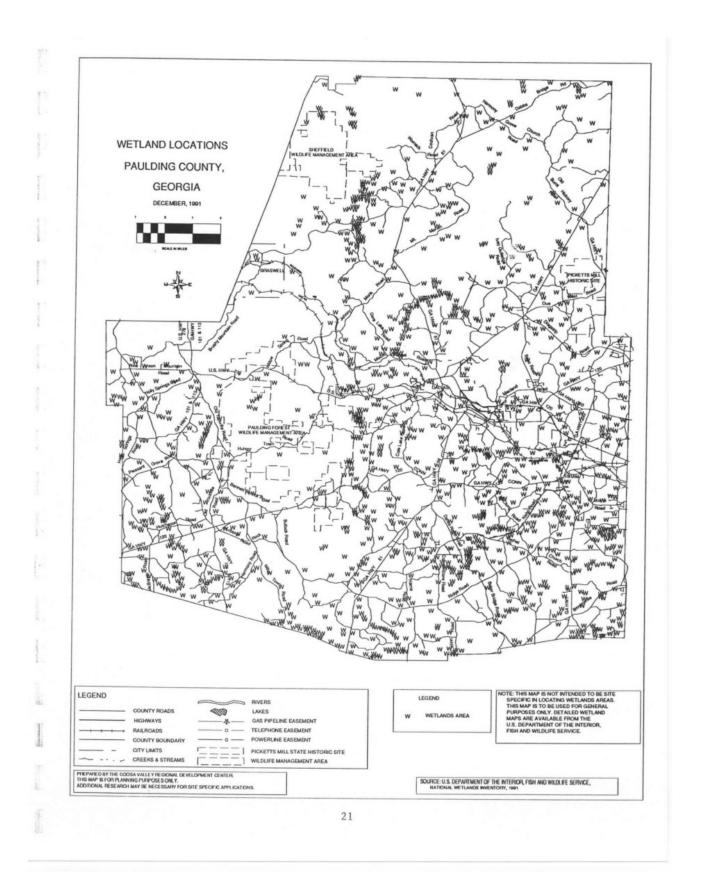

# **Environmental Planning Criteria**

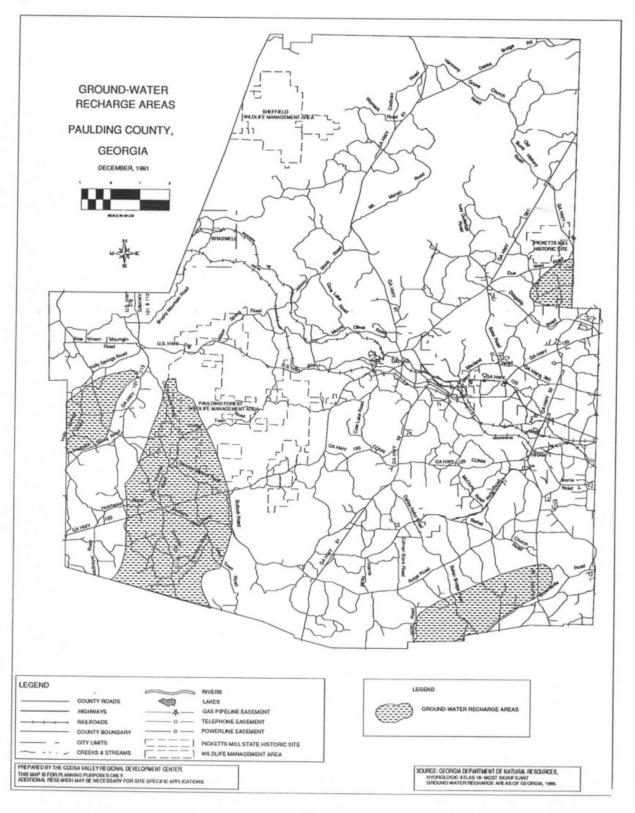

Paulding County has adopted all environmental planning standards as required by the Georgia Department of Resources (Part V Standards) and the Metropolitan North Georgia Water Planning District.

A map of Paulding County's water supply watershed is presented below. The overall assessment concluded that while the watershed was in relatively good condition, some areas were in danger of pollution. Based on physical habitat assessments, water quality parameters, fecal coliform and enterococci bacterial counts, and assessments of macroinvertebrate and fish communities, streams in the county compare favorably to assessments of other streams within the metro Atlanta Area. However some streams show signs of degradation from sediment inputs, elevated nutrients and fecal wastes.

The following maps represent the county's wetlands and groundwater recharge areas.

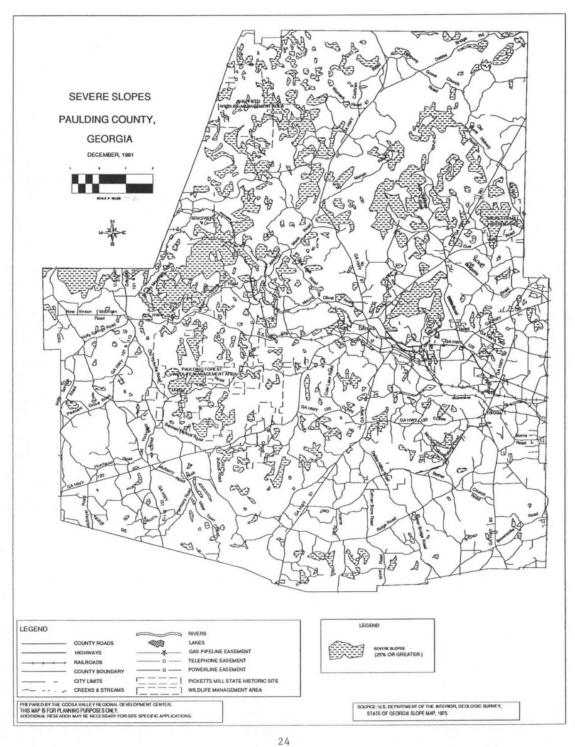

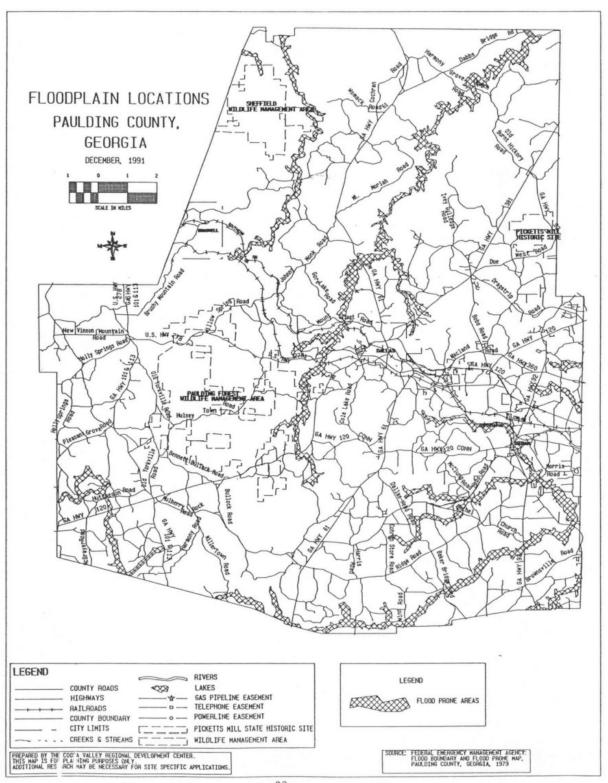

There are no river corridors or protected mountains within the county.

# Other Environmentally Sensitive Areas:

Paulding County has other areas of environmental concern. Steep slope areas of the county are illustrated in the following map:

The following map illustrates flood plains within the county.

# Endangered Plants and Animals in Paulding County

The Georgia Department of Natural Resources (GA DNR) has identified a number of plant and animal species deemed to be in need of protection or of special concern. In addition, the U.S. Fish and Wildlife Service of the Department of the Interior also has identified endangered animal species and plant life in Paulding County. The following table provides a list of these plant and animal species and their status.

Endangered and Threatened Animals and Plants: Paulding County, Georgia (Identified by the U.S. Fish and Wildlife Service)

ANIMALS			
Common Name	Scientific Name	Federal	State Status*
		Status*	
Tallapoosa Shiner	Cyprinella gibbsi		S2S3
Etowah Darter	Etheostoma etowahae	Е	S1
Cherokee Darter	Etheostoma scotti	T	S2
Tallapoosa Darter	Etheostoma tallapoosae	R	S2S3
Finelined Pocketbook	Hamiota altilis	T	S1S2
Lined Chub	Hybopsis lineapunctata	R	S2
Etowah Chub	Hybopsis sp. 9		S1
Pretty Shiner	Lythrurus bellus		S2
PLANTS			
Pink Ladyslipper	Cypripedium acaule	U	S4
Bay Star-vine	Schisandra glabra	Т	S2
Georgia Aster	Symphyotrichum	T	S2
	georgianum		

#### \*State Rank

- S1 Critically imperiled in state because of extreme rarity (5 or fewer occurrences).
- **S2** Imperiled in state because of rarity (6 to 20 occurrences).
- S3 Rare or uncommon in state (on the order of 21 to 100 occurrences).
- **S4** Apparently secure in state (of no immediate conservation concern).
- **S5** Demonstrably secure in state.
- **SA** Accidental in state, including migratory or wide-ranging species recorded only once or twice or at very great intervals.
- **SN** Regularly occurring, usually migratory and typically nonbreeding species.
- SR Reported from the state, but without persuasive documentation (no precise site records and no verification of taxonomy).
- SU Possibly in peril in state but status uncertain; need more information on threats or distribution.
- **SX** Apparently extirpated from state. GXC is known only in cultivation/captivity.
- **SE** An exotic established in state. May be native elsewhere in North America. Sometimes difficult to determine if native (SE?).
- SH Of historical occurrence in the state, perhaps not verified in the past 20 years, but suspected to be still extant.

- **Q** Denotes a taxonomic question either the taxon is not generally recognized as valid, or there is reasonable concern about its validity or identity globally or at the state level.
- ? Denotes questionable rank; best guess given whenever possible (e.g. S3?).

#### Federal Status (US Fish and Wildlife Service, USFWS)

The following abbreviations are used to indicate the legal status of federally-protected plants and animals or those proposed for listing.

proposed to	
LE	Listed as endangered. The most critically imperiled species. A species that may become extinct or disappear from a significant part of its range if not immediately protected.
LT	Listed as threatened. The next most critical level of threatened species. A species that may become endangered if not protected.
PE or PT	Candidate species currently proposed for listing as endangered or threatened.
С	Candidate species presently under status review for federal listing for which adequate information exists on biological vulnerability and threats to list as endangered or threatened.
PDL	Proposed for delisting.
E(S/A) or T(S/A)	Listed as endangered or threatened because of similarity of appearance.
(PS)	Indicates "partial status" - status in only a portion of the species' range. Typically indicated in a "full" species record where an infraspecific taxon or population has U.S. ESA status, but the entire species does not.

# Historic and Cultural Sites

#### **Purpose**

Historic resources are visual reminders of an area's past. They provide a link to an area's cultural heritage that helps an area understand its historic development, growth and changes over time. If historic resources are not protected, residents will eventually forget the memory and traditions that those resources preserve.

Paulding County has a distinct history and development that distinguish it from other areas in the State. The county's history and development, described in the developmental history section that follows, deserve to be remembered and taught to future generations. By considering its historic resources and promoting their protection in the county plan, the county is ensuring that Paulding's heritage will be preserved.

#### Inventory

Historic resources may include, but are not limited to, the following items:

- 1. <u>Landmark buildings and structures</u> are individual buildings or structures. They need not be historic in the sense that they are associated with a famous person or a specific important event in history. Buildings and structures of a certain type or method of construction or that are examples of a certain period in a community's history or development also warrant consideration.
- 2. <u>Commercial districts</u> may be a community's central business district or a crossroads area in a small community. These districts may have architectural, historic, or cultural significance, representing certain periods *of* time. They warrant planning consideration.
- 3. <u>Residential districts</u> may have architectural, historic, or cultural significance, also representing certain period *of* time. These districts warrant planning consideration.
- 4. <u>Rural resources</u> can include crossroad stores, crossroads settlements, farmsteads, rural districts, and individual outbuildings. Rural resources warrant planning consideration.
- 5. <u>Archeological and cultural sites</u> may include battlefield sites or sites of Indian activity. The sites warrant planning consideration. The county also has numerous historical markers in the Dallas-New Hope-Picketts Mill area.

Paulding County's historic resources were surveyed in 1977. The survey was essentially a preliminary windshield survey, meaning that county roads were driven, slides were taken of intact pre-1930 properties, and very brief written architectural descriptions were recorded. Fifty-four properties were recorded in Dallas, twenty in Hiram, and ninety-seven in the rural portions of the county for a total of 171 recorded pre-1930 properties.

As part of Paulding County's state mandated comprehensive planning, a preliminary survey was conducted by CVRDC staff in the spring of 1991. Again, county roads were driven, brief descriptions of building styles/types, estimated construction dates, and occupancy/vacancy were recorded, along with an assessment of the property's physical condition and integrity (degree of historic materials and features left intact).

At the time of the 1991 survey, there were two listings in Paulding county on the National Register of Historic Places: Paulding County Courthouse, part of a statewide courthouse thematic nomination, listed in 1980, and Pickett's Mill Battlefield Site, listed in 1973.

According to 1940 U. S. Census figures, there were 2,910 dwellings in the county at the time and 2,299 of those were farmhouses. The 1940 figures show that there was a building boom in Paulding County between 1890 and 1925, when 1,948 houses (of the 2,910 that existed in 1940) were reported to have been constructed.

Based on the 1940 census figures, there existed a potential for 2,910 dwellings that would quality as historic today, i.e., over 50 years old.

The 1991 preliminary survey recorded approximately 930 historic properties in the county, with approximately 220 in Dallas, 59 in Hiram, and approximately 650 in the remainder of the county.

The survey figures are not exact. Rapid recent development and widespread construction and earthmoving in the county made the survey difficult to conduct. Old roads had been closed, new roads had been opened and acres of open land had been subdivided since the last survey. Highways were especially difficult to survey. The survey generally represents the locations and distribution of historic properties in the county, but some individual locations need to be rechecked for accuracy.

The great majority of high style houses were found in Dallas and Hiram. Craftsmen and Queen Anne were the predominant styles. Gothic Revival, Tudor Revivals, and a few Colonial Revivals were also present. The remaining houses were the same building types as were found in rural portions of the county: gable front bungalows, gable front and wrap, hall and parlors, and pyramid cottages.

The rural houses were predominantly building types with minimal stylistic details. Of the approximately 640 rural houses surveyed, hall and parlors made up about 19 percent, gable fronts about 17 percent. Craftsman styled houses about 12 percent, gable front and wings about 11 percent, Queen Anne style about 6 percent, double pens about 5 percent, pyramid cottages about 4 percent, mass plan side gables about 4 percent, and saddlebags about 3 percent. Almost all of the dwellings were frame and one-story. Most chimneys were brick, but there were stacked stone chimneys.

Approximately 23 outbuildings or groups of outbuildings were recorded independently of dwellings. Five schools were recorded; 13 churches; 17 cemeteries; 1 depot; and

2 masonic meeting halls. (Of 55 schools reported to have existed in 1900, only one, possibly two, remain today).

A small number of commercial buildings remain. Dallas and Hiram each have two small commercial blocks. There *were* several small commercial buildings in crossroads settlements. Paulding County has recognizable commercial districts left in Dallas and Hiram. Locations and boundaries are marked on the U.S.G.S. maps on file at CVRDC.

Dallas, Hiram, and a few crossroads settlements have residential districts.

Locations and boundaries are marked on the U.S.G.S. maps.

There are several crossroads stores, individual rural sites, and outbuildings which deserve consideration. There are a number of crossroads settlements and rural clusters of buildings which also merit consideration. Potential exists for small rural districts at Burnt Hickory Ridge, Harmony Grove, Yorkville, New Hope, Crossroads, Route 61 south of Dallas, Route 120 south of Dallas, along Route 360 near Cobb County line, between routes 360 and 278 near Cobb County line, south of Union, near Sudie, southwest of Hiram, and a cluster on the Rockmart South U.S.G.S. map. Locations and rough boundaries are marked on U.S.G.S. maps on which this report is based.

There are 48 recorded archeological sites in Paulding County on file at the Georgia Archaeological Site File at UGA and at the Historic Preservation Section of DNR. The number of sites are roughly in line with the number of sites in some adjacent counties: 51 in Douglas, 42 in Haralson, and 49 in Polk, but far less than the 681 recorded sites in Bartow County and the 230 recorded sites in Carroll County, both adjacent to Paulding.

There are a number of Civil War military sites in the county as well. Pickett's Mill Battlefield Site is listed on the National Register of Historic Places.

An additional 26 sites have been marked with Georgia Historical markers, maintained by the Georgia Department of Natural Resources. The markers identify army camp sites, headquarters, and battle lines, and describe troop movements and tactics. A list of the markers is included with the 1991 preliminary survey forms, on file at CVRDC, the county, and the Historic Preservation Section of DNR. The list is taken from Georgia Historical Markers, Bay Tree Grove publishers of Helen, GA., published in 1973.

### **Assessment**

The windshield survey carried out in the spring of 1991 confirmed that the 1977 survey needs updating. The old survey provided no photographs, only slides, and no individual histories on the recorded buildings.

Ideally, a new comprehensive survey needs to be conducted. Barring that, the recent windshield survey can be used as a starting point for compiling a list of architecturally intact buildings and the recent survey maps can be used as the basis for identifying buildings with historic significance.

At a minimum, new photographs need to be taken, keyed to maps, and historic properties eventually recorded on land use maps so that information can be utilized by county and city governments, local businessmen and individual property owners.

In the past, the greatest threat to Paulding County's historic resources was the loss of farming population and resulting benign neglect. Abandoned historic buildings, especially farmhouses and outbuildings, slowly deteriorated.

More recently, with burgeoning population growth from the Atlanta metropolitan area, new development and road building appear to be the greatest threat. As land is cleared and graded, old buildings, particularly in rural areas, are increasingly torn down. Buildings in Dallas, Hiram, and the small crossroads communities have a higher survival rate, although there have been obvious losses, especially for commercial development at high profile intersections.

Inappropriate rehabilitation is another, more subtle, threat to the county's historic resources. Through a process of attrition, property appearances have changed over the years. Now, with large numbers of new residents coming into the county, is a time of either great potential or great danger for Paulding's historic resources. It is important that residents understand that an old building can be made comfortable, liveable, and mechanically sound without sacrificing the features that make it historic and appealing in the first place. A number of historic photographs exist of Dallas' and Hiram's old commercial buildings. These photographs can provide valuable information for restoring historic storefronts that have been obscured.

Except in extreme cases, rehabilitation is economically attractive, especially in light of federal and state tax incentives. Farm outbuildings are also eligible. Education about rehabilitation and tax incentives is imperative.

In the past, preservation has played a role in Paulding County's planning. The rehabilitation and continued use of the Paulding County Courthouse has served as a good example, as has the new courthouse annex, an outstanding and appropriate example of a well-thought out contemporary civic building which is attractive in its own right while complementing existing historic buildings and areas. The county government has set a good example for Paulding's residents.

There is a great deal of preservation potential in the county. Dallas, Hiram, and some of the crossroads settlements have commercial buildings, which would qualify for tax incentives and help revitalize those areas. There is historic housing stock throughout the county which can be rehabilitated to meet existing and future housing needs.

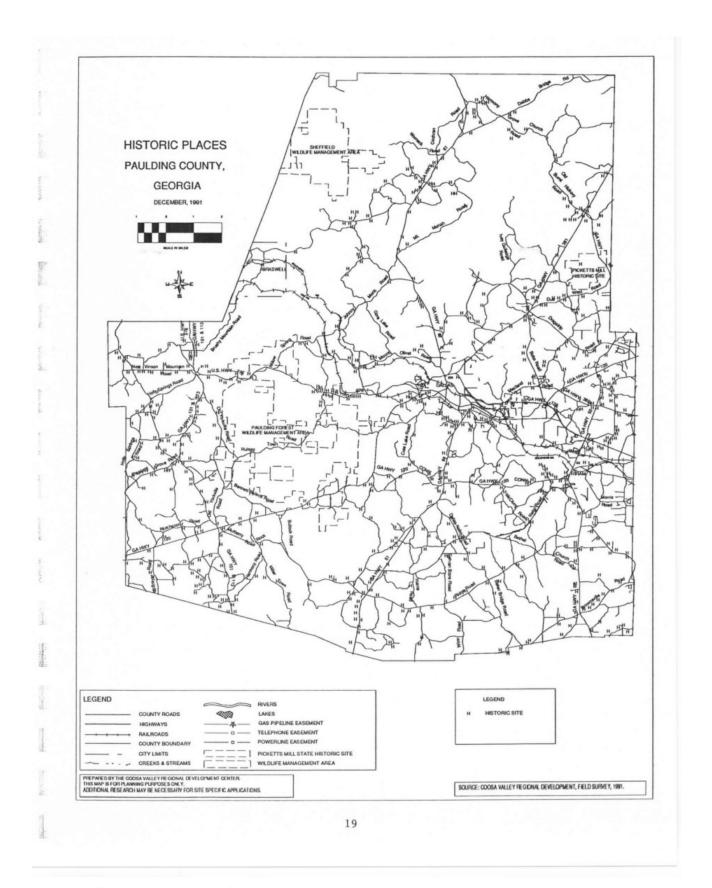

To a greater extent, the rehabilitation and use of historic properties can add to Paulding's sense of place, collective pride, and quality of life, an immeasurable contribution to an area growing as rapidly as Paulding County is.

The preservation planning described here is intended to be an integral part of Paulding's comprehensive planning. There should be no conflict between the two. Dallas, and possibly Hiram, may want to consider mixed use zoning for their downtown areas if and when it is appropriate for maximum use of those buildings.

The county, City of Dallas, and Paulding County Historical Society should work cooperatively in educating the public and providing leadership in preservation planning. They could jointly sponsor workshops on the county's historic resources, the National Register Program, tax incentives, and rehab techniques. A heritage education program through the public schools is another possibility and is strongly recommended. Dallas could also apply for DCA's Hometown Program to help its downtown revitalization.

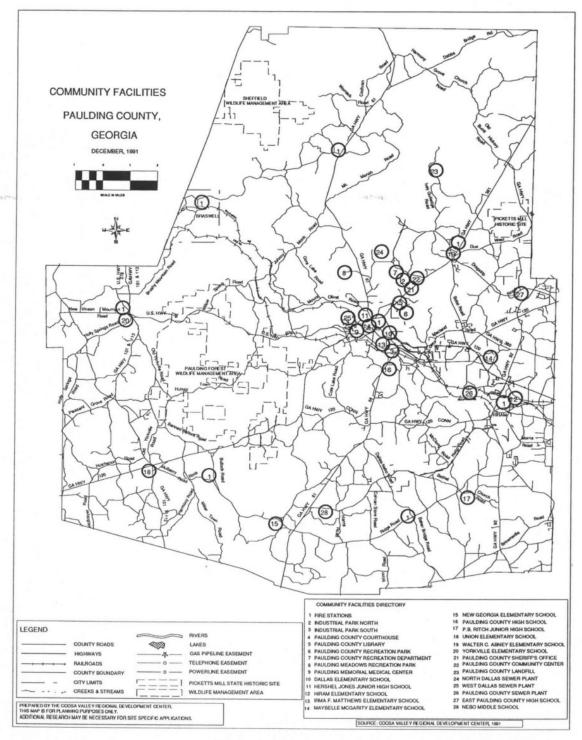

Joint county/city/historical society sponsorship is strongly recommended for a phased countywide multiple property nomination, which would recognize historic districts, sites, and individual properties throughout the county. The nomination would recognize the greatest number of properties and make National Register benefits available to them in the shortest amount of time.

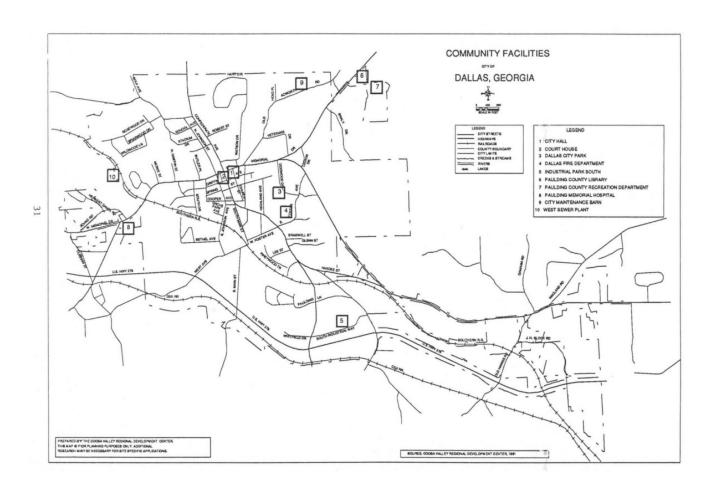

The University of Georgia completed a historic sites and resources survey in 2006. This survey will be made part of the overall Community Agenda in the establishment of policies relating to historic preservation in Paulding County.

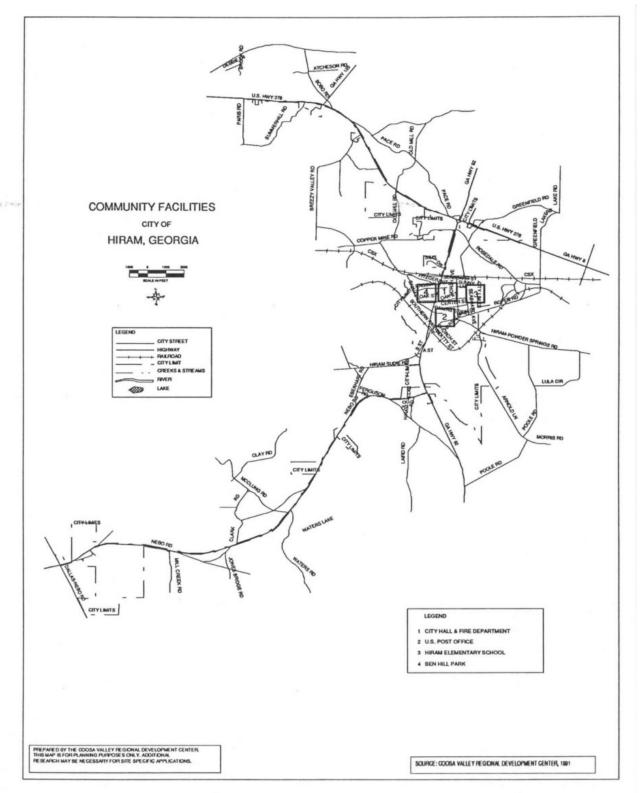

# Community Facilities and Services

The map below illustrates community services provided by Paulding County, including airport location, law enforcement, schools, fire stations, and hospitals. Additional maps illustrating community facilities and services are presented for each of the municipalities within the county in the section that follows.

# Libraries

# **Inventory, Paulding County**

The Paulding County Public Library is part of the 9-member West Georgia Regional Library network. With this network, the Paulding library has access to a wide range of educational materials and services. The library has approximately 35,000 books with capacity for approximately double that amount. The library was originally construction in 1979 with some 7,500 square feet and is currently under construction with a 5,000 square foot expansion (Dallas Community Facilities Map).

Other services offered by the library include public use of three computers, checkout of audio/visual equipment, periodical checkout and computerized book listing. The three computers are for public use along with a laser printer.

The audio/visual equipment and materials at the library includes 8 and 16 millimeter film projectors and films, camcorders, and VCR tapes, and a copy machine. Periodicals are also available with past issues available for checkout.

As part of the West Georgia Regional Library network, the Paulding County library is currently in the process of bar coding all books to be included as part of the computerized listing of all books available to the entire regional library network. This 1s expected to be completed by August of 1992.

## **Other Cultural Facilities and Activities**

Paulding County has recently completed a community facilities building which houses the Paulding County Senior Citizens Center and the Paulding County Council for the Arts. (Paulding County Community Facilities Map.)

Paulding County has begun a Council for the Arts. This council sponsors art competitions, art classes, plays and more. This is a private council which is wholly supported by the private sector. Paulding County also has a Fine Arts Association which is more specifically oriented towards the visual arts.

#### Assessment

The library is available to all citizens of Paulding County and the Cities of Dallas and Hiram. With increase in population, it is assumed that greater demands for resources such as a library will be needed within the next few years. With available book space and expansion capability, the Paulding County Library is ready for future growth.

# Water Supply

# **Paulding County**

Paulding County is supplied water by the Cobb County, Marietta Water Authority. Paulding County currently uses approximately 2.75 to 3.5 million gallons per day (MGD). Paulding County has a network of approximately 400 miles of water line along with seven storage tanks having 4.75 million gallons of combined capacity. (See Paulding County Water Map.) This distribution system consists primarily of water lines ranging from 6-24 inches. These lines are throughout most of the county, but are mainly concentrated in the eastern portion where growth has been located. Approximately 80% of Paulding County's water lines are less than 20 years old with the entire system experiencing only between 7 and 12% water loss. Water tank locations and storage capacities along with water line locations and sizes are listed on the Paulding County Water Map.

The Paulding County Water System is the responsible agency for maintenance, repair, replacement, and installation of all water lines and is completely self-supporting from county water bills.

# **City of Dallas**

The City of Dallas: is supplied water through an agreement with Paulding County. Dallas currently uses approximately 330,000 gallons per day (GPD) with a limit of 500,000 (GPD). See Dallas Water Map.

The city also has one 350,000 gallon standpipe water tank and water lines serving approximately 1,059 residential, commercial, and industrial customers.

Since 1980, the number of customers has increased by 25%. Approximately 85% of all Dallas households use city water.

## **City of Hiram**

The City of Hiram operates a water system supplied by three city-owned wells with backups provided through connections to the Paulding County Water System (Hiram Water Map).

Current consumption is 65,000 gallons/day and growing. Hiram has one elevated 65,000 gallon water tank serving 312 customers. This includes 287 residential, 22 commercial, and 3 other customers (churches, etc.). Approximately 62% of Hiram's residences use city water.

# **Assessment, Paulding County**

Paulding County's future water supply plans are to continue buying water from the Cobb County-Marietta Water Authority for the next 50 years (Table 25). This will bring Paulding County from 25% of the Cobb County-Marietta Water Authority (CCMWA) outside water consumption to 82% by the year 2010.

Another future alternate is the proposed 4,200-acre Haralson County reservoir. This could possibly provide an estimated 25-30% of Paulding County's future water needs. This is contingent upon completion of the three-year study currently underway and required years of construction.

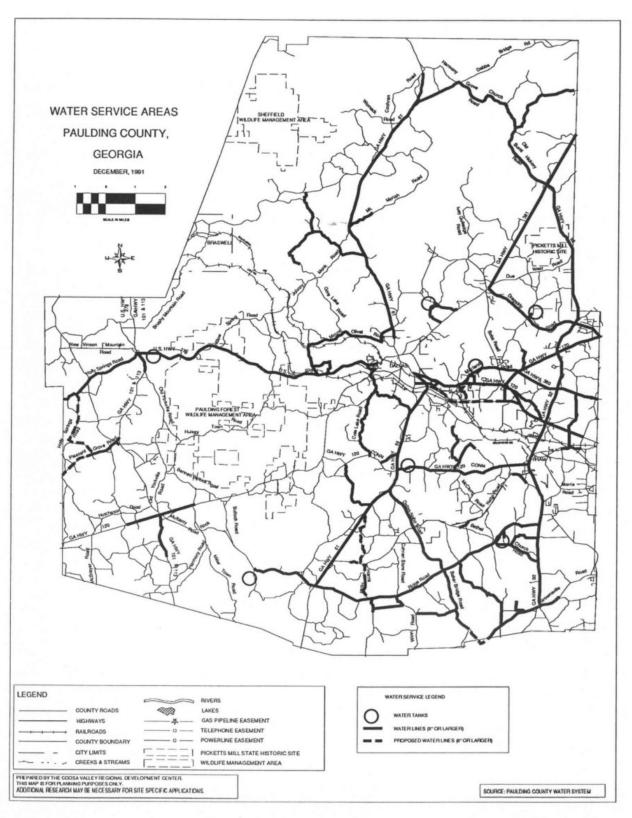

## Assessment, City of Dallas

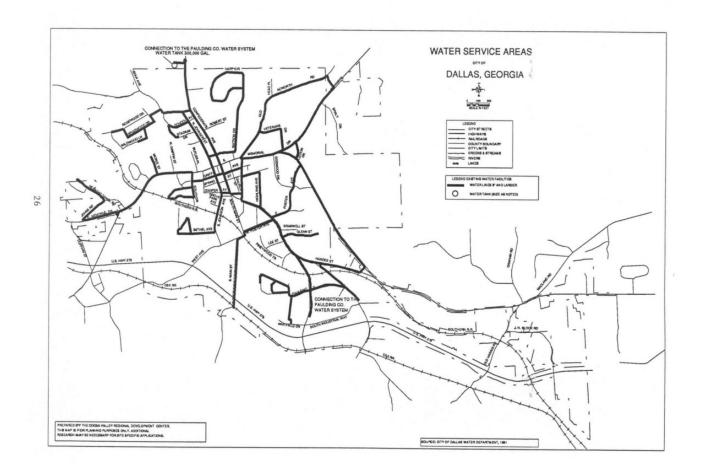

The City of Dallas has plans to continue buying water from Paulding County through the year 2010.

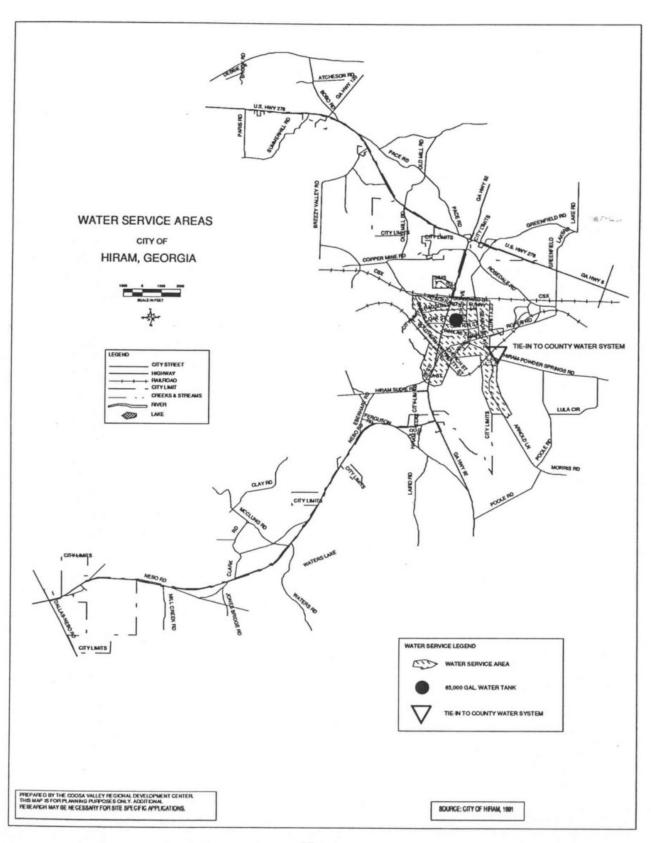

Currently, the City of Dallas has several improvements to be made to its system which are in various stages of planning or implementation. These improvements include looping of water lines and in-house adjustments. Other improvements include additional connections to Paulding County's water supply and testing of pressure availability of the one 350,000 gallon tank. As growth continues, reassessment of needs will be necessary.

## **Assessment, City of Hiram**

The City of Hiram plans to continue using the three city-owned wells as the primary source of water with the hookup to Paulding County's systems as a secondary source. With the age of some of Hiram's water lines, replacement of some lines will be necessary. Water needs and supply will be periodically re-examined for adequacy.

# Wastewater Treatment

Wastewater is conveyed to one of three existing treatment facilities, the Coppermine Land Application System (LAS), Pumpkinvine Water Reclamation Facility (WRF) or Upper Sweetwater Creek WRF via a sewer network that consists of approximately 60 miles of gravity sewers and 38 lift stations. The three treatment facilities have a combined effective treatment capacity of 2.5 MGD on a Maximum Month Average Day (MMAD) flow basis.

#### **Wastewater Infrastructure Evaluation**

The capacity of the existing wastewater treatment and collection system was evaluated. The sanitary sewer system includes a network of approximately 60miles of gravity sewers ranging in size from 8inches to 42inches in diameter. Due to the terrain of the service area, the system currently operates approximately 38 lift stations that transfer flow from one gravity sewer to another or directly to one of the wastewater treatment facilities.

# **Collection System Evaluation**

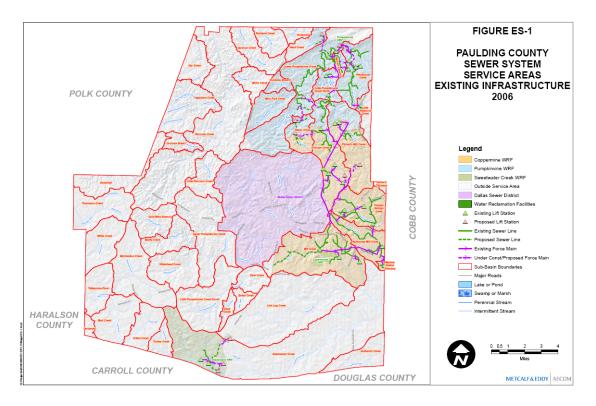

The remaining capacity of the existing system in each of the three service areas was evaluated by comparing flows projected for the three planning horizons: 2010, 2015, and 2025 to the hydraulic capacity of the pipes. In order to extend the sewer collection system, piping improvements were identified that can streamline operations of the system. With the installation of the recommended piping improvements 31 lift stations can be removed from service, which will reduce operations and maintenance costs for the system. The recommended wastewater collection system improvements are estimated to cost \$65 million, which primarily includes system expansions.

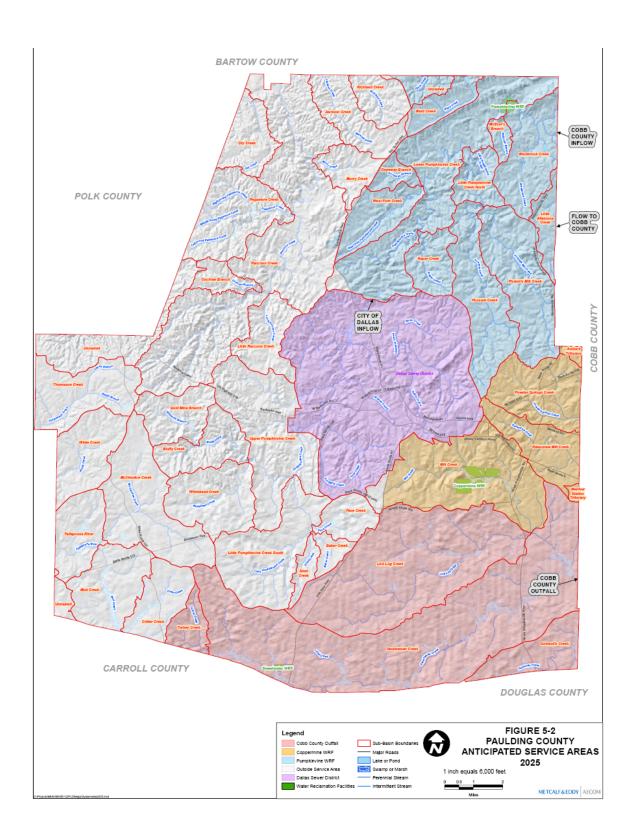

# **Treatment Facilities Evaluation**

The current combined treatment capacity of Coppermine LAS, Pumpkinvine WRF and Sweetwater WRF is 2.5 MGD on a MMAD basis. The MMAD flow in 2002 was 1.6 MGD, which is below the permitted capacity. However, nearly all of this capacity has been allocated to approved developments that are currently in the construction process but not yet generating flows. The capacity that is currently available in these facilities is anticipated to be quickly consumed by these flows. The flow projections for Coppermine, and to a lesser extent Pumpkinvine, indicate rapid growth and the need to expand capacity immediately. Plans are already underway to facilitate the first round of expansions at Coppermine and Pumpkinvine. An expansion schedule for each facility was developed in 2006. Total costs associated with treatment facilities expansions and upgrades are estimated to be \$347.5 million in 2006 dollars.

#### **Recommendations**

Based on the analyses performed for this Master Plan, a number of expansions in the wastewater system will be needed over the next 20 years. In the Pumpkinvine and Sweetwater sewer service areas, there is a necessary progression of projects to ensure adequate capacity in the downstream piping network; therefore, a phasing plan for improvements is outlined. As the Coppermine sewer service area is more established, fewer projects are needed and are less dependent upon each other. For this basin, the timing of the recommended projects will be related to development needs. The majority of the proposed projects will be funded with developer participation, either directly in the construction of sewer mains or through tap fees for wastewater treatment expansions. The projected revenue generated from tap fees for treatment expansions is anticipated to be less than the construction costs during most of the planning period. Supplemental funding sources should be investigated, including Georgia Environmental Facilities Authority (GEFA), loans, bonds, or public/private partnerships.

# Solid Waste Management

Currently, Paulding County's landfill has approximately 60 months left until it will be full (Paulding Community Facilities Map).

The Cities of Dallas and Hiram contract garbage pick-up to the private sector. Paulding County provides dumpsters for garbage collecting in all areas of the county. Contracted garbage pick-up is provided in the county with those subdivisions or individuals who wish to pay a private collector.

## **Assessment**

With the present laws enacted to reduce landfill waste by 25% by 1996, recycling of reuseable materials is an ever increasing issue of importance. Ways of collection and disposal will be re-examined as a coordinated effort falls to those who use the Paulding County landfill.

Among options currently available to reach the 25% goal are composting of yard waste and recycling of useable goods.

# Public Safety

# **Police Protection**

# **Paulding County**

The Paulding County Sheriff's Department is currently staffed by 91 employees including 38 jailers, 10 detectives, 25 deputies, 8 radio dispatchers, and 10 administrative employees.

The sheriff's department is housed in a new 41,000 square foot building, which was completed in January of 1991 and is located in the Paulding County Industrial Park (Paulding County Community Facilities Map). The new sheriff's office/jail complex has 21 cells with a capacity of 240 persons and was constructed to allow for additional cells to be added with minimal construction effort. The new sheriff's office/jail complex is expected to provide sufficient capacity for the next ten to fifteen years.

Dispatching for the sheriff's office as well as after hours for the City of Hiram is handled through the sheriff's office.

The sheriff's office also assists other enforcement agencies within Paulding County on an as needed basis.

Periodic re-examination of both facilities and personnel will be done to assure Paulding County's needs are met.

# **City of Dallas**

Currently, the City of Dallas Police Department includes 17 employees with one being part-time. This includes 12 officers and 5 radio dispatchers. The City of Dallas Police Department is housed in a building constructed in 1974 (Dallas Community Facilities Map). This building also currently houses meetings for the Dallas City Council, which will soon become available to the Dallas Police. No other expansions are currently planned. With increasing population, adequacy of both numbers of personnel and facilities will be periodically reexamined.

All jail functions are provided under contract with the Paulding County Sheriff's Department. Dispatching is handled twenty-four hours a day by the Dallas Police Department. Other enforcement agencies including the sheriff's office and the Georgia State Patrol are also available on an "as needed" basis.

## City of Hiram

The City of Hiram currently employs a four-man police department, which is housed in the same building as the Hiram City Hall (Hiram Community Facilities Map). The Hiram Police Department handles all police duties except for those requiring a detective, which are handled by the Paulding County Sheriff's Department. The City of Hiram is under contract with Paulding County for any needed jail services. Dispatching is handled by the City of Hiram personnel during the day and through the Paulding County Sheriff's Department at night. The City of Hiram will continue to periodically examine both personnel and facility needs for adequacy of service.

## Assessment

Both city police departments and the sheriff's department personnel and facilities should be adequate for expected growth through the year 2010. With cooperation between all three of these law enforcement agencies plus other state and federal agencies, all functions of law enforcement should be completely fulfilled.

# **Fire Protection**

Fire protection for Paulding County and the City of Hiram is accomplished through seven fire stations located throughout the county.

Approximately 130 volunteers man the seven stations with an average of 15-20 personnel per station. Another eight full-time personnel are employed through the Paulding County Emergency Services Center, which oversees dispatching and coordination of all seven fire stations (Paulding County Community Facilities Map).

Each of the seven stations are equipped with at least one class A pumper fire truck and one 1,000 gallon tanker with 3 stations having more than one 1,000 gallon tanker. In addition to this equipment, 6 of the 7 stations also have rescue vehicles with trained emergency medical technicians.

Each station covers a 25 square mile area with each station area overlapped by another. Mutual aid agreements with all surrounding counties as well as Dobbins Air Force Base are also in effect if additional manpower and equipment were to be needed.

Additional services provided through the fire department include capability to dispatch for the Paulding County Sheriff's Office, ambulance service or Dallas Police Department.

The Paulding County Fire Department also has the ability to direct lifeline helicopters to accident sites as needed.

The Insurance Services Office (ISO) has established a rating of both 7 and 9 for Paulding County. Continuing improvement in the fire services provided will strive towards reducing both of these.

With current and expected growth, constant re-evaluation of fire services for future needs will be a vital area of concern for Paulding County.

# **City of Dallas**

The City of Dallas operates a volunteer fire department consisting of 18 volunteers and two class A pumper fire trucks (Dallas Community Facilities Map). This department covers the entire City of Dallas with assistance from the Paulding County Fire Department as needed. Dispatching of the fire department is handled through the City of Dallas Police Department.

The current Insurance Services Office rating for the City of Dallas is a seven.

Current facilities and manpower are felt to meet the present need, but will need to be examined as growth continues.

# **City of Hiram**

The City of Hiram currently relies on the Paulding County Fire Department station number 2 to provide all fire service needs (Paulding County Community Facilities Map).

As Hiram continues to grow, adequacy of fire protection will be re-examined.

# **Assessment**

As growth continues, adequacy of fire protection will be of major importance to Paulding County, Dallas, and Hiram residences. Regular reevaluation of fire services will be needed to ensure quality of service can keep pace with growth.

With the possibility of beginning a 911 emergency number plan, knowledge of exact capabilities of all fire stations in the county and cities will be essential.

## **Emergency Medical Services**

Currently, both cities and the county rely on a single private provider for emergency medical services. This private provider currently has three ambulances with two being advanced units staffed by emergency medical technicians.

Paulding Memorial Medical Center serves Paulding County and the two cities within as Paulding County's only hospital. Paulding Memorial offers a fully staffed emergency room, a five-bed intensive care unit, 2 operating rooms, and 35 regular stay beds. In addition, Paulding Memorial has an active staff of sixteen doctors with 53 more available on a part-time or consulting basis. This total list of 69 doctors represent some 20+ fields of specialized medicine as well as general practice medical doctors.

Paulding County operates a computerized address system which allows immediate emergency services response. This system is similar to a 911 service except that a phone number or address must be given for a response to occur. This is operated by the Paulding County Fire Department and includes the cities of Dallas and Hiram.

# Assessment

The current Paulding Memorial Medical Center is well equipped to handle most types of general medical care required. There is currently discussion of building a new hospital to replace Paulding Memorial to fulfill needs into the year 2010.

The current computerized address system used for emergency response works well for Paulding County, but as more growth is expected, discussion of a 911 system has begun. With either system, the emergency response system of Paulding County is expected to be sufficient through the year 2010.

# Parks and Recreation

# **Inventory**

The Paulding County Recreation Department maintains four parks jointly continuing 258 acres. These parks are, with acreage and location, as follows: Braly Park (95 acres), Paulding County; Paulding Meadows (125 acres), Paulding County; Sarah Babb (22 acres), City of Dallas; and Ben Hill Strickland (11 acres), City of Hiram (Paulding County Community Facilities Map).

These parks offer a wide variety of recreational facilities including softball and baseball fields, tennis courts, basketball courts, horseshoe courts, soccer fields, walking paths, and tot lots.

The Paulding County Recreation Department maintains the four (4) parks mentioned as well as providing participation in scheduling and sponsoring of several activities listed.

Currently, the City of Dallas has just completed a ten and one-half acre passive park for the citizens of Dallas. Passive in this sense means a park where leisure activities such as walking paths and lakes, are provided. This park will be owned and operated, and maintained entirely by the City of Dallas.

In addition to the parks of Paulding County, Dallas and Hiram, a recent interest in use of the abandoned CSX Seaboard Railroad line (Silver Comet Trail) has developed.

## **Assessment**

A yearly needs assessment for Paulding County shows a few of the areas in which more recreational opportunity is needed versus what is already in place. Please note that the Paulding County Recreation Plan is made part of this Comprehensive Plan.

In two general areas of recreation, outdoor fields, including baseball. softball and soccer fields, and swimming pools, Paulding County met or nearly met all needs.

Paulding County has purchased properties in the northern and sourthern portions of the county for new park that will provide active and passive recreational opportunities for the citizens.

The County is also in the process of preserving over 7,000 acres of greenspace (Paulding Forest) in the western portion of the County.

# Intergovernmental Coordination

# Introduction

Paulding County is located adjacent to the counties of Polk, Haralson, Carroll, Douglas, Cobb, and Bartow. Many of the adjacent counties are used for comparison in the tables and figures within this report. The County cooperates on numerous policies and services with its municipalities, which include Dallas, Hiram and Braswell. One school district, Paulding County Public Schools is housed within county boundaries. Paulding County and the Cities of Dallas, Hiram, and Braswell have in place approved Service Delivery Startegies. These Stategies are under review and will be updated as part of the development of this Comprehensive Plan.

# Formal Collaborative Arrangements

Paulding is an active participant in the planning process with neighboring counties through the Coosa Valley Regional Development Commission, and collaborates with other communities to protect water resources though the Northwest Georgia Regional Water Resources Partnership. The County coordinates transportation planning with the Atlanta Regional Commission. Paulding County has recently been added to the non-attainment region of the metro Atlanta area for purposes of improving air quality.

There are collaborative arrangements with the municipalities on the Keep Paulding Clean , recycling programs, animal control services, emergency services, and indigent services. An arrangement with Chattahoochee Technical College to provide training for local businesses is also an example of both inter-jurisdictional and public/private cooperation. Cooperative service arrangements exist with other governments to provide public safety, libraries and solid waste recycling services.

# **Partnerships**

The county works to establish partnerships with private industry and business organizations. In addition to collaboration with various Chambers of Commerce in the area, the county is engaged in a number of economic development initiatives with other governments. The Industrial Building Authority (IBA) focuses much of their effort on business recruitment. The IBA has the following bank of industrial properties to attract business to the county:

In 2003, the county, municipalities, school districts and major businesses collaborated on a strategic planning process including public hearings, stakeholder meetings, and resulted

in the establishment of goals, objectives and clarification of priorities for the county as a whole.

## **School Board**

# Inventory, Paulding County, Cities of Dallas and Hiram

The Paulding County Board of Education currently administers 30 schools including North Paulding High School and North Paulding Middle School, both currently under construction. Total enrollment of the Paulding County School System for 2006-2007 is 25,700. This includes grade schools, middle schools and high schools. This enrollment represents a 59% increase since the 1999-2000 school year enrollment of 15,255 students. Projections of growth for Paulding County's school age population are listed above. Since 1997, six elementary schools, three middle schools, and three high schools have been constructed in Paulding County.

Other post high school educational resources available in the area include the Paulding Campus of Chattahoochee Technical College located in Dallas. The University of West Georgia is located in Carrollton. The Atlanta metropolitan area also provides several public and private colleges and technical institutes within a short commute.

Within the next five years an additional four elementary and two middle schools will be required to serve the expected growth. These new schools actively reflect the expected growth by approximately 9,000 students in next five years. These new schools reflect the five-year total growth rate of approximately 35%.

# Transportation

Paulding County is currently in the process of completing a Comprehensive Transportation Plan. This Plan will be incorporated within the overall Comprehensive Plan and made part of it.

The following is general transportation information.

## **Inventory**

In Paulding County, several state highways along with one US highway make access to and within the county possible. Eight state routes including 6, 61, 92,101,120,360,381, and 786 and one US route 278 traverse the county in both north-south and east-west directions (Transportation Map).

US 278, Paulding's only US route, runs in an east-west orientation providing a 4-1ane access which carries over 18,032 cars per day in and through Paulding County. This is an average of all traffic counts taken on the highway.

Three state routes, highways 61, 92, and 101 traverse the county from south to north carrying approximately 10,251;14,826; and 3,055 cars per day respectively. These state routes provide the main intracounty and through traffic function for county residences as well as pass-through traffic. All three are 2-lane highways.

As listed earlier, Highways 120 and 278, provide the majority of the east west travel that is not particular just to the more heavily populated east side. This highway, as with US 278, traverses the length of the county and provides for intracounty as well as for through traffic. It has a traffic count of approximately 8,236 cars per day.

The rest of the state highways listed also serve the county and cities but do not traverse the county and are limited in the way that they serve Paulding County. All roads within Paulding County, the City of Dallas, and the City of Hiram are classified according to their usage into standard categories known as their "functional classification." This classification breaks roadways down into 4 basic categories.

These functional classification classes are as follows:

<u>Interstate Highways.</u> These are multi-lane, limited access roadways designed for continuous, high speed movement of traffic. In general, there are no red lights with access made by on-ramps that are above or below the level of the highway itself. There are none in Paulding County.

<u>Arterials.</u> These are designed to carry large amounts of traffic throughout a community and to destinations such as shopping and employment. Examples of arterials in Paulding County include US 278,6,61, 120, 360, and 381.

<u>Collectors.</u> The function of this type of roadway is to collect traffic from the local streets, such as a street in a subdivision, and carry it to an arterial such as Macklin Road/SR 360. This type of roadway provides a balance between rapid movement and access to property.

Local Streets. This type of roadway provides and land access function.

These are the streets, such as in a subdivision, where the houses are actually located.

Paulding County maintains a "road register" which is an active comprehensive inventory of all county and state maintained roads. This road register contains information on road width, type of surface, shoulder, number of lanes, beginning and ending points and other pertinent data. With modifications it could also be useful in serving as a functional classification and maintenance listing also.

The only railroad currently serving Paulding County which crosses into the city limits of both Dallas and Hiram. This line runs into Atlanta on the eastern side and on to Rome in the northwest. An abandoned CSX Seaboard line also runs almost parallel to the active Norfolk Southern line. This line also came from Atlanta and continued to Rockmart and

beyond. It was abandoned entirely through Paulding County in 1988 and later incorporated in the Silver Comet Trail.

General aviation needs are served by Hartsfield International Airport in Atlanta (30 miles) or the Cartersville-Bartow County Airport (16 miles). The Paulding County Airport is currently under construction and it is anticipated to open in 2008.

Paulding County is currently well served by its system of roads and railways.

With current plans for two highways to be widened, improving access in and through Paulding County is an ongoing process. The first is Highway 61, which is planned to be widened in segments from the City of Dallas to Villa Rica in Carroll County. This construction is part of the overall plan to make GA 61 a 4-1ane highway. The second highway, State Route 120, has been widened from the Cobb County line to the City of Dallas. This widening will make the Atlanta area more accessible to Paulding County for employment and shopping. With present and projected growth, improvements to the highway system must keep pace.

As pointed out before, in excess of 75% of Paulding County's work force, including Dallas and Hiram, work outside the county. With improvements to Paulding County's road system constantly ongoing, residents of Paulding and the Cities of Dallas and Hiram should all be well-served through the year 2030.

# Alternative Modes

# **Bicycle and Pedestrian Facilities**

There are no county-designated bicycle paths in Paulding County. The state of Georgia has designated one bicycle paths in the county, however. The path (State Bicycle Route 5) runs along Vinson Mountain Crossing for a distance of approximately 1.5 miles. The Silver Comer Trail is not a state designated bicycle path but it is located in Paulding County. It runs from the Polk County line in the west to the Cobb County line in the east (approximately 17 miles). The Silver Comet Trail is located within all three municipalities.

The county does not have an effective network of sidewalks. While developers may be required to provide sidewalks within new subdivisions, there is little, if any, connectivity between these neighborhood sidewalks and other areas in the county.

# **Public Transportation**

Paulding County has no public transit.

There are two Park and Ride lots in Paulding County; one is located on Villa Rica Highway (SR 61) south of Dallas and the other is located at the First Baptist Church in Dallas. These lots provide opportunities for carpooling in the metro Atlanta area.

Overall, most Paulding County residents must rely on automobiles for normal daily transportation needs, although residents in some areas of the City of Dallas may be able to walk to many of their most popular destinations. Approximately 75 percent of Paulding County's work force commutes out of the County.

# Parking

Availability of adequate parking is not a problem within unincorporated Paulding County. No areas were identified as requiring parking upgrades. The City of Dallas as part of their LCI study has identified parking alternatives for the downtown area.

# **PAULDING COUNTY**

(Dallas, Hiram, and Braswell)

# COMPREHENSIVE PLAN 2007 – 2027

# **COMMUNITY PARTICIPATION PROGRAM**

April 26, 2007

Paulding County Community Development Department 120 East Memorial Drive Dallas, Georgia 30132

#### COMMUNITY PARTICIPATION PROGRAM

#### 1.0 Introduction

# **Purpose**

Public involvement is one of the most important elements to the overall successful development of a community's Comprehensive Plan. The primary purpose of the Community Participation Program is to include citizens, business community, building community, neighborhoods, and community leaders in identifying issues, needs, goals and objectives in preparing for anticipated continued growth and to manage this growth. The Community Participation Program also ensures that the Comprehensive Plan reflects community values and desires by involving a diverse spectrum of stakeholders in development of the Community Agenda. One of the primary objectives of the Community Participation Plan is to seek community input through 10 public hearings including the two hearings required by the Minimum Planning Standards and Procedures. The planned public hearings will include community hearings from all areas of Paulding County and the Cities of Dallas, Hiram and Braswell.

# 2.0 Scope

Paulding County and the Cities of Dallas, Hiram and Braswell are required to update the Comprehensive Plan by October 31, 2007. Due to the location and size of the County, the Plan will be developed in accordance with the Advanced Planning Level Local Planning Requirements which were effective May 1, 2005.

# **Public Participation**

The Minimum Planning Standards and Procedures require that at least two (2) public hearings be held during the planning process for major plan amendments. In an effort to obtain maximum public input, Paulding County and the Cities of Dallas, Hiram, and Braswell will hold a minimum of ten (10) public hearings/ meetings. The hearings/meetings will be held throughout Paulding County as well as within the Cities of Dallas, Hiram, and Braswell. The majority of the hearings will be scheduled during the month of August 2007 to inform the community about the purpose of the plan and to encourage future participation. One public meeting was held on July 11, 2006 to receive input on the Short Term Work Program. An additional hearing was held on April 26, 2007 prior to the adoption of resolutions to send the Community Agenda into regional and state review. All public hearings and meeting will be agressively publicised in three area newspapers, the County's website, announced at other public meetings.

The purpose of the public hearings was for staff to receive public comments concerning the draft comprehensive plan prior to it being submitted into regional and state review.

The hearings were also designed to inform the community on the contents of the plan and allow final suggestions and comments to be made prior to submittal.

Finally, a Comprehensive Plan Stakeholders group was formed to review, advice and provide direction on the update to the Paulding County Comprehensive Plan. This group, which was made up of community leaders and citizens, was instrumental in providing staff with direction and review. The Stakeholders were beneficial in participating in the refinement of preliminary goals and objectives developed from the earlier stages of the planning process.

#### Involvement of the Board of Commissioners

In addition to the Board of Commissioners being involved in various public participation activities, public hearings were held in each of the four Commission Posts in an effort to reach out to the community for input on the contents of the Plan and the direction the plan takes as a guide into the future. The Board of Commissioners was also instrumental in providing guidance, direction and support to staff during the plan development process.

#### Stakeholders

The following is the Stakeholders list.

<u>Name</u>	<u>Company</u>	<u>Address</u>
Alan Cook	Dallas Tire	216 Legion Rd
Allen Krivsky	Heath & Lineback Engineers	12 Powder Springs Street, Suite 240

# **COMMUNITY AGENDA SCHEDULE**

This section provides a presentation of the anticipated schedule for the implementation and completion of the Community Agenda portion of the Comprehensive Plan. This schedule is not intended to be static. It is expected that the process itself will dictate that specific content and scheduling changes be made during the implementation phase of the project.

COMMUNITY AGENDA							
	2007						
	April	May	June	July	August	September	October
Completion of Community Assessment	X			•			
30 day review period for Community Assessment		X					
Kickoff event to explain the planning process to the community	X						
Formation/appointment of stakeholders and committee to guide development of the plan	X	X					
Community-wide event to discuss and prioritize the Preliminary Issues and Opportunities list	X						
Processing of community input			X	X			
Community-wide event to produce or refine the Future Development Map				X	X		
Processing of community input by guidance committee				X	X		
Development of draft Implementation Program by plan preparers					X	X	
Community event to react to draft Implementation Program					X	X	
Processing of community input by guidance committee					X	X	
Assembly of draft Community Agenda by plan preparer					X	X	
Community event to react to draft Community Agenda (this could be 2nd public hearing required in Planning Standards)						X	
Processing of community input by guidance committee						X	X
Adoption of transmittal resolution by local government and submittal of Community Agenda to RDC for review							X

9. We have housing programs that focus on households with special			
needs.		X	
10. We allow small houses built on small lots (less than 5,000 square	X		
feet) in			
appropriate areas.			

## **Quality Community Objectives**

## **Paulding County** (Braswell)

## **Local Assessment**

Educational	Oppor	tunities
-------------	-------	----------

Educational and training opportunities should be readily available in each community - to permit community residents to improve their job skills, adapt to

technological advances, or to pursue entrepreneurial ambitions.

Statement	Ye	No	Comments
1. Our community provides work-force training options for our		X	
citizens.			
2 One was defense training a recorder a revide siting as with skills for		X	
2. Our workforce training programs provide citizens with skills for jobs that are		$\Lambda$	
available in our community.			
•		37	
3. Our community has higher education opportunities, or is close		X	
to a community that does.			
4. Our community has job opportunities for college graduates, so		X	
that our			
children may live and work here if they choose.			
Governmental Relations			

## **Regional Solutions**

Regional solutions to needs shared by more than one local jurisdiction are preferable to separate local approaches, particularly where this will result in greater efficiency and less cost to the taxpayer.

Statement	Ye	No	Comments
We participate in regional economic organizations.		X	

2.	We participate in regional environmental organizations and initiatives, especially regarding water quality and quantity issues.		X	
3.	We work with other local governments to provide or share appropriate services, such as public transit, libraries, special education, tourism, parks and recreation, emergency response, E-911, homeland security, ect.		X	
4.	Our community thinks regionally, especially in terms of issues like land use, transportation and housing, understanding that these go beyond local government borders.	X

## **Regional Cooperation**

Regional cooperation should be encouraged in setting priorities, identifying shared needs, and finding collaborative solutions, particularly where it is critical to

success of a venture, such as protection of shared natural resources or development of a transportation network.

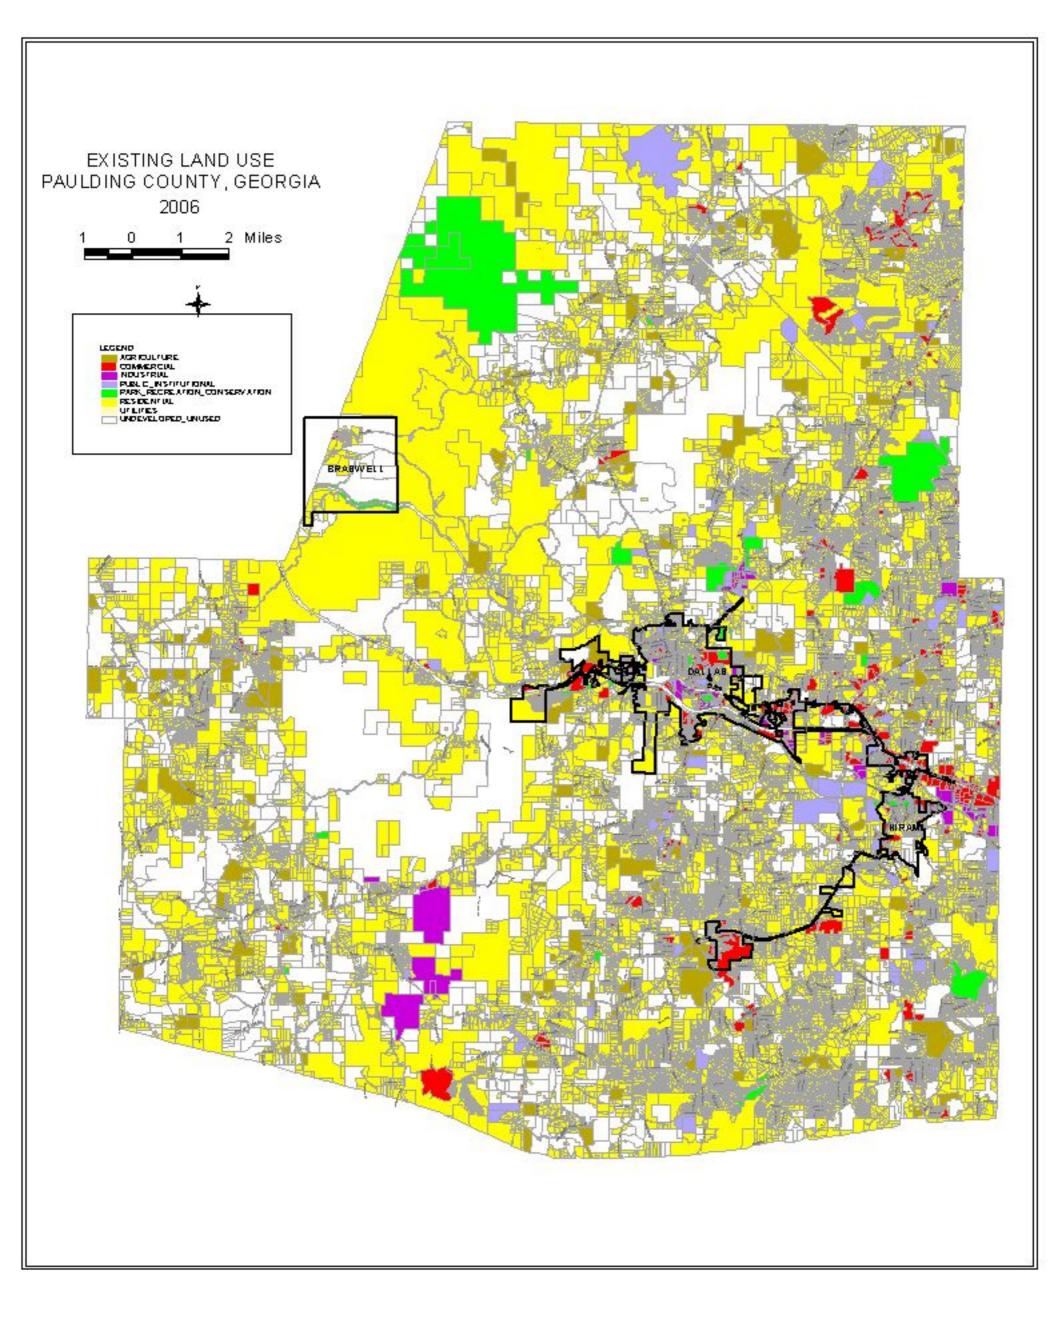

Sta	Statement		No	Comments
1.	We plan jointly with our cities and county for Comprehensive Planning	X		
2.	We are satisfied with our Service Delivery Strategies		X	Need assistance
3.	We initiate contact with other local governments and institutions in our region in order to find solutions to common problems, or to craft regionwide strategies.	X		
4.	We meet regularly with neighboring jurisdictions to maintain contact, build connections, and discuss issues of regional concern.		X
